Neurofeedback in the Treatment of Developmental Trauma: Calming the Fear-Driven Brain Sebern F. Fisher, 2014-04-21 Working with the circuitry of the brain to restore emotional health and well being Neurofeedback a type of brain training that allows us to see and change the patterns of our brain has existed for over 40 years with applications as wide ranging as the treatment of epilepsy migraines and chronic pain to performance enhancement in sports Today leading brain researchers and clinicians interested in what the brain can tell us about mental health and well being are also taking notice Indeed the brain's circuitry its very frequencies and rhythmic oscillations reveals much about its role in our emotional stability and resilience Neurofeedback allows clinicians to guide their clients as they learn to transform brain wave patterns providing a new window into how we view and treat mental illness In this cutting edge book experienced clinician Sebern Fisher keenly demonstrates neurofeedback's profound ability to help treat one of the most intractable mental health concerns of our time severe childhood abuse neglect or abandonment otherwise known as developmental trauma When an attachment rupture occurs between a child and her or his primary caregiver a tangle of complicated symptoms can set in severe emotional dysregulation chronic dissociation self destructive behaviors social isolation rage and fear Until now few reliable therapies existed to combat developmental trauma But as the author so eloquently presents in this book by focusing on a client's brain wave patterns and training them to operate at different frequencies the rhythms of the brain body and mind are normalized attention stabilizes fear subsides and with persistent dedicated training regulation sets in A mix of fundamental theory and nuts and bolts practice the book delivers a carefully articulated and accessible look at the mind and brain in developmental trauma what a trauma identity looks like and how neurofeedback can be used to retrain the brain thereby fostering a healthier more stable state of mind Essential clinical skills are also fully covered including how to introduce the idea of

The Neurobiology of Attachment-Focused Therapy Jonathan Baylin, Daniel A. Hughes, 2016-08-23 Uniting attachment focused therapy and neurobiology to help distrustful and traumatized children revive a sense of trust and connection How can therapists and caregivers help maltreated children recover what they were born with the potential to experience the safety comfort and joy of having trustworthy loving adults in their lives This groundbreaking book explores for the first time how the attachment focused family therapy model can respond to this question at a neural level It is a rich accessible investigation of the brain science of early childhood and developmental trauma Each chapter offers clinicians new insights and powerful new methods to help neglected and insecurely attached children regain a sense of safety and security with caring adults Throughout vibrant clinical vignettes drawn from the authors own experience illustrate how informed clinical processes can promote positive change Authors Baylin and Hughes have collaborated for many years on the treatment of maltreated children and their caregivers Both experienced psychologists their shared project has been the development of the science based model of attachment focused therapy in this book a model that links clinical interventions to the crucial underlying processes of trust mistrust and trust building helping children learn to trust caregivers and

caregivers to be the trust builders these children need The book begins by explaining the neurobiology of blocked trust using the latest social neuroscience to show how the child s early development gets channeled into a core strategy of defensive living Subsequent chapters address among other valuable subjects how new research on behavioral epigenetics has shown ways that highly stressful early life experiences affect brain development through patterns of gene expression adapting the child s brain for mistrust rather than trust and what it means for treatment approaches Finally readers will learn what goes on in the child s brain during attachment focused therapy honing in on the dyadic processes of adult child interaction that seem to embody the core mechanisms of change elements of attachment focused interventions that target the child s defensive brain calm this system and reopen the child s potential to learn from new experiences with caring adults and that it is safe to depend upon them If trust is to develop and care is to be restored clinicians need to know what prevents the development of trust in the first place particularly when a child is living in an environment of good care for a long period of time What do abuse and neglect do to the development of children s brains that makes it so difficult for them to trust adults who are so different from those who hurt them This book presents a brain based understanding that professionals can apply to answering these questions and encouraging the development of healthy trust
