Rayner, 1984 *Neuron's Function Revealed*, 2009 There is a new way to explore biology's secrets With a flash of light scientists from the U S Department of Energy's Lawrence Berkeley National Laboratory and the University of California Berkeley zeroed in on the type of neural cell that controls swimming in larval zebrafish Using innovative light activated proteins and gene expression techniques the scientists zapped several zebrafish with a pulse of light and initiated a swimming action in a subset of fish that was traced back to the type of neuron that drives the side to side motion of their tail fins The technique behind this needle in haystack search for the neural roots of a specific behavior could become a powerful way to learn how any biological system works <http://newscenter.lbl.gov/press-releases/2009/09/16/light-activated-protein>
