

INSTALLATION

For under eave installation, the sensor head must be rotated as shown in the next two steps for proper operation and to avoid the risk of electrical shock.

For eave mount only:

- ❑ Swing the sensor head towards the clamp screw.

- ❑ Rotate the sensor head clockwise 180° so the controls face down.

If the sensor pops out of the ball joint, loosen the clamp screw and push the sensor back into the ball joint. Tighten the clamp screw when done.

These instructions show the sensor wired to flood-lamps. The **white sensor wire is neutral**. The **black sensor wire is hot**. The red wire is the switched "hot" wire. The **lighting load** (500 W, 4.2A max) is placed across the white and red wires.

WIRE THE LIGHT CONTROL

⚠ WARNING: Turn power off at circuit breaker or fuse.

- ❑ Remove the existing light fixture, if present.

- ❑ After screwing the sensor into the wall plate, connect the junction box wires to the light control wires by twisting together and securing with wire connectors.

Optional: Connect additional load across the white and red wires. Total lighting load including lampheads on fixture must not exceed 500W (4.2A).

MOUNT THE LIGHT

- ❑ Follow the instructions that came with your light fixture for mounting and adjusting the light fixture.
- ❑ Keep regular PAR-38 lamps at least 1" (25 mm) from the sensor. Halogen lamps should be kept at least 2" (51 mm) from the sensor.

TEST AND ADJUSTMENT

- ❑ Turn on the circuit breaker and light switch.

NOTE: Sensor has a 1 1/2 minute calibration period before it will detect motion. When first turned on, wait 1 1/2 minutes.
