THE M6800 FAMILY

The M6800 microprocessor was the first MPU of the M6800 Family and still remains a highly cost-effective processor for a great many process-control and data-communications applications. It contains four powerful instructions and six different addressing modes plus it uses buffer capability, and a full range of compatible peripheral chips offer the widest possible latitude in system implementation. After years of field experience, the M6800 has earned an enviable reputation as one of the easiest-to-use processors available.

Moreover, to tailor the system to your specific needs (if the lowest cost, the M6800) total implementation is available in three different packages, two different temperatures and three speed ranges.

This table is the right first device in the M6800 Family. The following microprocessor and microperipheral families are offshoots and enhancements of the M6800 architecture. It provides migration either the M6800 Family as a whole or some individual components.
