**Firsts in Flight** Terrance W. MacDonald, 2017-09-01 Alexander Graham Bell and his team of innovative young engineers created groundbreaking new technologies during three years of furious activity in Baddeck Nova Scotia in the early 1900s The knowledge and skills of this group allowed them to innovate flight technologies which have continued to be fundamental to aircraft design In this book aviation author Terrance MacDonald puts together for the first time the full story of their achievements Bell's unique group of engineers a mechanical specialist and a military officer built over twenty airplanes which incorporated many new sophisticated technological developments Bell's well known

Silver Dart was only one of a long line of his team's experimental airplanes. This book describes the aircraft, the people, and the communities who participated with Bell in his mission to construct a reliable and secure flying machine. Over the years, the group started to lose members, and when the Canadian government refused to purchase aircraft based on Bell's experiments, the reconfigured group folded. Meanwhile, one group member left to found a major aircraft manufacturing operation in the US. Bell's team carefully documented all their work, and as a consequence, there are hundreds of compelling photos from this era. The book includes 60 of these images and offers links to early movies documenting these aircraft and their flights.

*LIFE Neil Armstrong* The Editors of LIFE, 2018-10-12

First Man on the Moon: His Life and Legacy. That's one small step for a man, one giant leap for mankind. When Neil Armstrong placed his booted foot on the lunar surface, he took what was already conceived as a transcendent moment in a tumultuous time, and unbelievably, he elevated it. He wasn't just an astronaut, and it wasn't just about science, the space race with the Russians, or any other one thing. It was about possibility and joy. Neil Armstrong, the new special edition from the editors of LIFE, tells the story of a legendary pilot that risked everything alongside a brave team of astronauts and NASA engineers to achieve the impossible. You'll learn all about the space race and how Houston's finest made good on President John F. Kennedy's promise to reach the moon by the end of the 1960s. About the immense sacrifices, both in time spent and lives lost, the number of missions and the number of failures before the ultimate success of the Apollo 11 landing. Plus, TIME senior writer Jeffrey Kluger stops by to regale us with a tale of the time he spent with Armstrong, and we take a peek behind the curtain at the new Oscar-nominated film based on the American hero's life. *First Man*, LIFE's Neil Armstrong, is a must-have for the adventurer in your life and a totemic reminder that when we put our minds to it, anything is possible.

Neil Armstrong needs no introduction. He is a genuine American hero whose pathfinding aerospace endeavors extended well beyond his command of the epic Apollo 11 lunar landing mission in 1969. Few appreciate that he was involved in not one but two life-or-death piloting situations prior to the moon landing that necessitated lightning-fast reactions: the stuck spacecraft thruster on the Gemini VIII earth orbital flight and the sudden failure of a lunar landing test vehicle during Apollo training. In both cases, Neil's swift action saved his life, and in the case of the Gemini flight, his co-pilot David Scott. In doing so, he also saved both the Gemini and Apollo programs from serious setbacks that might have jeopardized the American space program. Then, flying the Apollo 11 lunar module on that historic day, his calm professionalism once again was critical to mission success as he flew the lander over a boulder-filled crater to a safe landing.
