Networked Life 20 Questions And Answers:

Networked Life, 2012 How does Google sell ad space and rank webpages How does Netflix recommend movies and Amazon rank products How can you influence people on Facebook and Twitter and can you really reach anyone in six steps Why doesn't the Internet collapse under congestion and does it have an Achilles heel Why are you charged per gigabyte for mobile data and how can Skype and BitTorrent be free How are cloud services so scalable and why is WiFi slower at hotspots than at home Driven by twenty real world questions about our networked lives this book explores the technology behind the multi trillion dollar Internet and wireless industries Providing easily understandable answers for the casually curious alongside detailed explanations for those looking for in depth discussion this thought provoking book is essential reading for students in engineering science and economics for network industry professionals and anyone curious about how technological and social networks really work

Networked Life Mung Chiang, 2012-09-10 How does the internet really work This book explains the technology behind it all in simple question and answer format [The Real Internet Architecture](#) Pamela Zave, Jennifer Rexford, 2024-08-06 This book offers a description of the architecture of the Internet as it actually exists now It is a revolutionary description based on a completely new model of network architecture explaining how the Internet has evolved from its origins and how it is still evolving and exposing previously unarticulated patterns and trends in network architecture Essentially all discussion of the Internet is still dominated by the classic five layer model put forth by its originators This model is so outdated that it is a hindrance to understanding Internet evolution as well as to teaching and doing effective research on networking This book replaces it with a new model of networking called compositional network architecture This model has been formalized but the book does not use the formal model rather the book relies on the model's accuracy and precision as a foundation for a convincing informal explanation accessible to a much broader audience than a formal model would be the formal model will be available on a companion website along with teaching material Many scholars and practitioners seeing the Internet only through the lens of the classic Internet architecture complain that the Internet has not evolved past its original architecture Compositional network architecture is a general model for describing many architectures and it shows clearly how the Internet has evolved since the early 1990s and how it continues to evolve Though the book is based on a conceptual model and is therefore a relatively abstract treatment it is illustrated with hundreds of contemporary Internet examples so there is no lack of concrete detail or grounding in reality Compared to older works on networking the book is also more concerned with network services how a network helps users communicate This is a natural outgrowth of the Internet as subject matter Performance and scalability are the usual themes of Internet literature as they were certainly the most important challenges of the Internet's early years Since the 1990s however progress on performance and scalability has been steady and incremental The major motivation for Internet evolution since then has been the need for enhanced services including mobility multicast security privacy reliability and support for content distribution

and the book will engage with these themes It will serve as a reference for anyone dealing with internet architecture and as a graduate textbook for networking courses

Computational Network Science Henry Hexmoor,2014-09-23 The emerging field of network science represents a new style of research that can unify such traditionally diverse fields as sociology economics physics biology and computer science It is a powerful tool in analyzing both natural and man made systems using the relationships between players within these networks and between the networks themselves to gain insight into the nature of each field Until now studies in network science have been focused on particular relationships that require varied and sometimes incompatible datasets which has kept it from being a truly universal discipline Computational Network Science seeks to unify the methods used to analyze these diverse fields This book provides an introduction to the field of Network Science and provides the groundwork for a computational algorithm based approach to network and system analysis in a new and important way This new approach would remove the need for tedious human based analysis of different datasets and help researchers spend more time on the qualitative aspects of network science research Demystifies media hype regarding Network Science and serves as a fast paced introduction to state of the art concepts and systems related to network science Comprehensive coverage of Network Science algorithms methodologies and common problems Includes references to formative and updated developments in the field Coverage spans mathematical sociology economics political science and biological networks

Emerging ICT Policies and Regulations V. Sridhar, 2019-09-26. This book constructs both educational and research arguments on various dimensions of Information and Communication Technology (ICT) policy and regulation. There has been a paradigm shift in the ICT industry due to convergence of various technologies, the ubiquity of the Internet, the emergence of app economy and the pervasiveness of social media. These pose policy and regulatory challenges in the areas of industry structure, market power of firms, pricing of products and services, interconnection of networks, radio spectrum management, intellectual property rights, data privacy and security. The common thread throughout the different sections of the book is the massive adoption of digitization by individuals, enterprises, governments and societies and the critical role of associated regulation and policy for its success. The book addresses 13 important questions in the areas of: i) Telecom Regulation including bundling of products and services, interconnection and radio spectrum; ii) Internet Regulation including governance of the Internet, Net Neutrality, quality of service and cyber security; iii) App Economy Regulation including Over-the-Top communication and broadcast services, ICT platform intermediation, sharing economy, data protection and privacy; and iv) Emerging Technology Regulation including Artificial Intelligence and Intellectual Property Rights.
