Networking Arguments:

Networking Arguments Rebecca Dingo, 2012-04-22 Networking Arguments presents an original study on the use and misuse of global institutional rhetoric and the effects of these practices on women particularly in developing countries Using a feminist lens Rebecca Dingo views the complex networks that rhetoric flows through globally and nationally and how it is often reconfigured to work both for and against women and to maintain existing power structures To see how rhetorics travel Dingo deconstructs the central terminology employed by global institutions mainstreaming fitness and empowerment and shows how their meanings shift depending on the contexts in which they are used She studies programs by the World Bank the United Nations and the United States among others to view the original policies then follows the trail of their diffusion and manipulation and the ultimate consequences for individuals To analyze transnational rhetorical processes Dingo builds a theoretical framework by employing concepts of transcoding ideological traffic and interarticulation to uncover the intricacies of power relationships at work within networks She also views transnational capitalism neoliberal economics and neocolonial ideologies as primary determinants of policy and arguments over women's roles in the global economy Networking Arguments offers a new method of feminist rhetorical analysis that allows for an increased understanding of global gender policies and encourages strategies to counteract the negative effects they can create

Networking Argument Carol Winkler, 2019-11-11 This edited volume presents selected works from the 20th Biennial Alta Argumentation Conference sponsored by the National Communication Association and the American Forensics Association and held in 2017 The conference brought together scholars from Europe Asia and North America to engage in intensive conversations about how argument functions in our increasingly networked society The essays discuss four aspects of networked argument Some examine arguments occurring in online networks seeking to both understand and respond more effectively to the acute changes underway in the information age Others focus on offline networks to identify historical and contemporary resources available to advocates in the modern day Still others discuss the value added of including argumentation scholars on interdisciplinary research teams analyzing a diverse range of subjects including science education health law economics history security and media Finally the remainder network argumentation theories explore how the interactions between and among existing theories offer fruitful ground for new insights for the field of argumentation studies The wide range of disciplinary backgrounds and methodological approaches employed in Networking Argument make this volume a unique compilation of perspectives for understanding urgent and sustaining issues facing our society

DevOps for Networking Steven Armstrong, 2016-10-28 Boost your organization's growth by incorporating networking in the DevOps culture About This Book Implement networking fundamentals to the DevOps culture with ease improving your organization's stability Leverage various open source tools such as Puppet and Ansible in order to automate your network This step by step learning guide collaborating the functions of developers and network administrators Who This Book Is For The book is aimed for Network Engineers Developers IT operations and System admins who are planning to incorporate Networking in DevOps culture and have no knowledge about it What You Will Learn Learn about public and private cloud networking using AWS and OpenStack as examples Explore strategies that can be used by engineers or managers to initiate the cultural changes required to enable the automation of network functions Learn about SDN and how an API driven approach to networking can help solve common networking problems Get the hang of configuration management tools such as Ansible and Jenkins that can be used to orchestrate and configure network devices Setup continuous integration delivery and deployment pipelines for network functions Create test environments for network changes Understand how load balancing is becoming more software defined with the emergence of microservice applications In Detail Frustrated that your company's network changes are still a manual set of activities that slow developers down It doesn't need to be that way any longer as this book will help your company and network teams embrace DevOps and continuous delivery approaches enabling them to automate all network functions This book aims to show readers network automation processes they could implement in their organizations It will teach you the fundamentals of DevOps in networking and how to improve DevOps processes and workflows by providing automation in your network You will be exposed to various networking strategies that are stopping your organization from scaling new projects quickly You will see how SDN and APIs are influencing DevOps transformations which will in turn help you improve the scalability and efficiency of your organizations networks operations You will also find out how to leverage various configuration management tools such as Ansible to automate your network The book will also look at containers and the impact they are having on networking as well as looking at how automation impacts network security in a software defined network Style and approach This will be a comprehensive learning guide for teaching our readers how

networking can be leveraged to improve the DevOps culture for any organization

How to Belong Belinda A. Stillion Southard, 2018-10-05 In *How to Belong* Belinda Stillion Southard examines how women leaders throughout the world have asserted their rhetorical agency in troubling economic social and political conditions Rather than utilizing the concept of citizenship to bolster political influence the women in the case studies presented here rely on the power of relationships to create a more habitable world With the rise of global capitalism many nation states that have profited from invigorated flows of capital have also responded to the threat of increased human mobility by heightening national citizenship's exclusionary power Through a series of case studies that include women grassroots protesters a woman president and a woman United Nations director Stillion Southard analyzes several examples of women all as embodied subjects in a particular transnational context pushing back against this often violent rise in nationalist rhetoric While scholars have typically used the concept of citizenship to explain what it means to belong Stillion Southard instead shows how these women have reimagined belonging in ways that have enabled them to create national regional and global communities As part of a broader conversation centered on exposing the violence of national citizenship and proposing ways of rejecting that violence this book seeks to provide answers through the powerful rhetorical practices of resilient and inspiring women who have successfully negotiated what it means to belong to be included and to enact change beyond the boundaries of citizenship
