Networks Of Echoes Imitation Innovation And Invisible Leaders Computational Social Sciences:

Networks of Echoes Bruce J. West, Malgorzata Turala, Paolo Grigolini, 2014-04-03 *Networks of Echoes Imitation Innovation and Invisible Leaders* is a mathematically rigorous and data rich book on a fascinating area of the science and engineering of social webs. There are hundreds of complex network phenomena whose statistical properties are described by inverse power laws. The phenomena of interest are not arcane events that we encounter only fleetingly but are events that dominate our lives. We examine how this intermittent statistical behavior intertwines itself with what appears to be the organized activity of social groups. The book is structured as answers to a sequence of questions such as: How are decisions reached in elections and boardrooms? How is the stability of a society undermined by zealots and committed minorities and how is that stability re-established? Can we learn to answer such questions about human behavior by studying the way flocks of birds retain their formation when eluding a predator? These questions and others are answered using a generic model of a complex dynamic network, one whose global behavior is determined by a symmetric interaction among individuals based on social imitation. The complexity of the network is manifest in time series resulting from self-organized critical dynamics that have divergent first and second moments, are non-stationary, non-ergodic, and non-Poisson. How phase transitions in the network dynamics influence such activity as decision making is a fascinating story and provides a context for introducing many of the mathematical ideas necessary for understanding complex networks in general. The decision making model DMM is selected to emphasize that there are features of complex webs that supersede specific mechanisms and need to be understood from a general perspective. This insightful overview of recent tools and their uses may serve as an introduction and curriculum guide in related courses.

Paolo Grigolini and 50 Years of Statistical Physics Bruce J. West, Simone Bianco, 2023-04-03 This volume celebrates the over fifty year career in non-equilibrium statistical physics of Professor Paolo Grigolini of the Center for Nonlinear Science at the University of North Texas. It begins by positioning Grigolini in a five-dimensional science personality space with the following axes: Sleeper, Keeper, Leaper, Creeper, and Reaper. This introduction to the person is followed by a sequence of papers in the various areas of science where his work has had impact, including subtle questions concerned with the connection between classical and quantum systems, a two-level atom coupled to a radiation field, classical probability calculus, anomalous diffusion that is Brownian yet non-Gaussian, a new method for detecting scaling in time series, and the effect of strong Anderson localization on ultrasound transmission among other topics.

Right here, we have countless book **Networks Of Echoes Imitation Innovation And Invisible Leaders Computational Social Sciences** and collections to check out. We additionally come up with the money for variant types and plus type of the books to browse. The standard book, fiction, history, novel, scientific research, as well as various other sorts of books are readily straightforward here.

As this Networks Of Echoes Imitation Innovation And Invisible Leaders Computational Social Sciences, it ends taking place inborn one of the favored ebook Networks Of Echoes Imitation Innovation And Invisible Leaders Computational Social Sciences collections that we have. This is why you remain in the best website to see the incredible book to have.
