Focus on Meningitis Research Phyllis V. Strong, 2004 Meningitis is an infection of the fluid of a person's spinal cord and the fluid that surrounds the brain. People sometimes refer to it as spinal meningitis. Meningitis is usually caused by a viral or bacterial infection. Knowing whether meningitis is caused by a virus or bacterium is important because the severity of illness and the treatment differ. Viral meningitis is generally less severe and resolves without specific treatment, while bacterial meningitis can be quite severe and may result in brain damage, hearing loss, or learning disability. For bacterial meningitis, it is also important to know which type of bacteria is causing the meningitis because antibiotics can prevent some types from spreading and infecting other people. Before the 1990s, *Haemophilus influenzae* type b (Hib) was the leading cause of bacterial meningitis, but new vaccines being given to all children as part of their routine immunizations have reduced the occurrence of invasive disease due to *H. influenzae*. Today, *Streptococcus pneumoniae* and *Neisseria meningitidis* are the leading causes of bacterial meningitis. *Gantz's Manual of Clinical Problems in Infectious Disease* James W.

Neurobiology of Infectious Diseases Tatiana Barichello, Felipe Dal-Pizzol, Rodrigo Hasbun, 2024-11-30 *Neurobiology of Infectious Diseases* covers mechanisms underlying infectious diseases. It is divided into six distinct sections, beginning with the foundations of neuroinfection. This section includes chapters on the role of microbiota, gut-brain axis, and specialized blood-neuronal barriers in the neurobiology of infectious diseases. The next three sections detail various bacterial infections, parasitic infections, viral infections, and fungal infections of the central nervous system. The last section reviews the proteins and other peripheral mediators that affect the central nervous system. Internationally contributed by experts in the field, this book sets the foundation of neurobiology and infectious disease. Neurobiology is the study of cells of the nervous system and the organization of these cells into functional circuits that process information and mediate behavior.
