Handbook of Neurochemistry Abel Lajtha, 2012-12-06 Anyone who has any contact with mental patients old or young or their families or just visits a mental hospital or school for the retarded is aware of the tremendous suffering caused by malfunctioning of the brain The function of no other organ is so crucial for our everyday life our proper functioning indeed our happiness and no other illness causes as much anguish to patients or their families as mental illness It is surprising and sad therefore how little effort has been devoted to research in this area more so because such research is the only hope to ameliorate this suffering or to speak in the language of politics or economics to decrease the enormous sums that we spend on trying to help our patients with what is must generally be agreed are the most primitive and inadequate methods of treatment Clearly since functions of the brain are vital not only in illness but in health pathology is not the only area of concern to neurochemists but it is an area that urgently needs neurochemical contributions Progress in this field has been slower than in other areas of neurochemistry and it seems that solutions in this field are very elusive The reason for this is

that the experimental approach is especially difficult in conditions specific for humans or specific for complex behavior

Beans, Roots and Leaves Paul Bernard Foley, 2003 Parkinsonism of various types has long been a debilitating and cruel affliction for significant numbers of people and even today the cure remains elusive The present volume explores the colorful and sometimes alarming history of the attempts to provide at least some relief from the symptoms of this disorder commencing with interesting reports from ancient India and medieval Europe and continuing until the present time Especial attention is devoted to L DOPA therapy still the leading pharmacological approach to the disorder more than forty years after its first application and its place in the development of neurochemistry But the employment of solanaceous plant alkaloid based therapies which dominated antiparkinsonian therapy until the mid 20th century and the broad range of other approaches which found varying degrees of popularity including those stimulated by the encephalitis epidemic which appeared in Europe during the First World War are also discussed The author concludes that antiparkinsonian therapy was never irrational but was rather always determined by prevailing medical pharmacological and scientific paradigms so that its history is inextricably linked with experimental and clinical developments in these fields
