Neurogerontology Aging And The Nervous System:

Neurogerontology James F. Willott, PhD, 1999-07-25 *Neurogerontology* tells the story of how the aging brain affects all aspects of cognition and physical performance. It comprehensively links the principles and substance of neuroscience with gerontology and psychology. Written largely from a behavioral neuroscience perspective, *Neurogerontology* explores the functional relationships between the central nervous system and psychological phenomena of aging, including perception, arousal, learning, cognition, and motor behavior. Willott emphasizes healthy aging, but dementia and other pathological conditions are discussed when relevant. This evidence-based approach to the neuroscience of aging makes this a valuable reference for professionals as well as an informative textbook for students in gerontology courses. *Pathology of the Aging Human Nervous System* Serge Duckett, J. C. de la Torre, 2001-05-17 This book is a concise and practical compendium of neuropathological information for all professionals whose responsibility it is to make diagnoses, care, and help elderly humans afflicted with neurological and/or psychiatric disorders. The term neuropathology includes a multitude of disciplines, including pathology, histology, genetics, immunology, biochemistry, radiology, etc. This disciplinary approach is reflected in this book. This new edition has been completely revised and brought up to date from the 20th to the 21st century. Basic neuroscientists were invited to contribute chapters explaining and describing basic scientific principles underlying the neuropathological disciplines. Also, additional information is provided concerning medicolegal issues, neuropharmacology, and a list of support groups for the elderly neurologically or mentally impaired in Brazil, Canada, Germany, the United Kingdom, and the USA.

The Aging Nervous System Gabe J. Maletta, Francis J. Pirozzolo, 1980 *Annual Review of Gerontology and Geriatrics, Volume 19, 1999* David Oslin, MD, Ira Katz, MD, PhD, Paul R. Katz, MD, 1999-12-07 Increasingly, there will be a demand from clinicians for a better understanding of how to translate research from basic science and clinical trials into meaningful treatment recommendations for late-life mental disorders. In this volume, the editors have compiled the most cutting-edge research findings on common mental disorders in the elderly. Section 1 addresses methodological issues and raises critical concerns for researchers in the field, such as how best to design and implement large clinical studies as well as how to translate their findings into practice for mental health providers. Section II focuses on treatment for specific diseases, such as late-life depression, substance abuse, and psychosis. Of particular note are chapters on behavioral treatments for persons with Alzheimer's Disease. For clinicians and researchers in the field of gerontology and geriatrics. *The American Psychiatric Publishing Textbook of Geriatric Neuropsychiatry* Norman L. Foster, 2011-04-27 The third edition of the popular *Textbook of Geriatric Neuropsychiatry* thoroughly reviews this clinical subspecialty devoted to the diagnosis and treatment of psychiatric and behavior disorders in aging patients who display impaired brain function. In this text, world-renowned neuropsychiatrists and neuroscientists provide practical application of the latest research for both experienced clinicians and those new to the study of neuropsychiatry for the elderly.
