Neuron-Glia Interaction in Neuroinflammation Akio Suzumura,Kazuhiro Ikenaka,2013-09-13 Accumulation on glia is an active pathological element in many neurological disorders Gliosis produces neuroinflammation through both neurotrophic and inflammatory means but the exact mechanism through which this happens remain unclear It is suspected that damage to neurons activates the growth of glial cells The proposed book focuses on the interaction between neurons and glia to help elucidate the pathophysiology of neuroinflammation in neurological disorders *Neuroimmunology in Africa* Willias Masocha,Roberto Furlan,Richard Idro,2023-05-29 *Targeting Neuroinflammation for Novel Therapeutics in Neurodegenerative Diseases* Pukar Khanal,Jatin Machhi ,Rupesh V. Chikhale,2025-06-02 Neurodegenerative disorders have increasing incidence with limited treatment options Approaches to target neuroinflammation in various neurodegenerative disorders such as Alzheimer s disease AD involve a quest for innovative therapeutics A comprehensive understanding of the quest for small compounds that improve amyloid processing regulate autophagy hinder A accumulation and investigate the array of phytochemicals present in naturally occurring nootropics ethnomedicines and polypharmacology may facilitate the exploration of diverse pharmacological approaches to impede disease advancement Galantamine from snowdrops Galanthus spp is just one example of a current core medication used in the management of cognitive decline pointing to the potential of small molecules in this context In addition the combinations of computational and experimental pharmacological methods enable the exploration of small molecules within crucial neurodegenerative processes which can help to develop potential therapeutic compounds **The Biology of Glial Cells: Recent Advances** Ishan Patro,Pankaj Seth,Nisha Patro,Prakash Narain Tandon,2022-04-09 This book reviews the role of glial cells astrocytes microglia oligodendroglia satellite cells and Schwann cells in neuronal health and diseases It discusses the latest advances in understanding their origin differentiation and hemostasis The book also examines the role of microglial cells in central nervous system CNS development maintenance and synaptic plasticity Further the book presents the functions of astrocytes in healthy CNS and their critical role in CNS disorders including Parkinson s and Alzheimer s diseases Notably the book describes the pathobiology molecular pathogenesis stem cells and imaging characteristics of gliomas It defines the role of glial cells in regulating iron homeostasis and their effect on the neurodegeneration of neurons Lastly it covers the structure function and pathology of oligodendrocytes and their role in neuronal health and disease **Advances in Biomedical and Molecular Neuroscience** Robert J. Neuromodulation Treatment of Parkinson's Disease and Aging-Related Movement Disorders Kailiang Wang,Fangang Meng,Yuqing Zhang,Adolfo Ramirez-Zamora,Shin-Yuan Chen,2024-04-22 Parkinson s disease PD is an age related neurodegenerative disorder characterized by progressive motor disability with a spectrum of non motor symptoms Similar to Parkinson s disease essential tremor dystonia Huntington s disease and other aging related movement disorders are widespread in the elderly with relatively unideal medicine treatment effects In recent years deep brain stimulation DBS has been established as an effective treatment for PD and other aging related movement disorders especially with motor symptoms However there are still many problems to be solved in research work and clinical practice in this field For example it is unclear regarding the most effective stimulation targets or the underlying mechanism of DBS And it is still unknown how to choose the optimal targets among STN GPi PSA VIM etc or if we could choose the nerve fiber for stimulation besides the nuclei And despite wearable sensors could be a powerful tool for the digital evaluation of movement disorders or provide the feedback biomarkers for DBS the closed loop biomarkers for DBS are still lacking Furthermore apart from PD the DBS treatment in gene related dystonia Huntington s disease and other movement disorders also needs to be further explored

Neurobiology of Infectious Diseases Tatiana Barichello,Felipe Dal-Pizzol,Rodrigo Hasbun,2024-11-30 Neurobiology of Infectious Diseases covers mechanisms underlying infectious diseases It is divided into six distinct sections beginning with the foundations of Neuroinfection This section includes chapters on the role microbiota gut brain axis and specialized blood neuronal barriers play in neurobiology of infectious diseases The next three sections detail various bacterial infections parasitic infections viral infections and fungal infections of the central nervous system The last section reviews the proteins

and other peripheral mediators that affect the central nervous system Internationally contributed by experts in the field this book sets the foundation of neurobiology and infectious disease Neurobiology is the study of cells of the nervous system and the organization of these cells into functional circuits that process information and mediate behavior Current research is vital for determining pharmaceutical and medicinal treatments for neurological disorders psychiatric disorders and diseases Reviews the role and function of specialized Blood Neuronal Barriers Covers various forms of brain infections encephalitis and meningitis Features content on SARS Cov 2 and CNS including pathogenesis to clinical manifestation *Meeting of the Portuguese Society for Neurosciences SPN2019* Sara Xapelli, Cláudia Guimas Almeida, Maria José Diógenes, 2021-12-03

Paradigm Shifts and Innovations in Cellular Neuroscience

Enrico Cherubini,Dirk M. Hermann,Arianna Maffei,Marie-Ève Tremblay,Egidio D'Angelo,Christian Hansel,2025-08-28 The field of Cellular Neuroscience like science in general progresses through paradigm shifts that revolutionize theories methodologies and approaches This Research Topic focuses on understanding the paradigm shifts that have shaped and continue to shape Cellular Neuroscience We welcome articles that delve into these transformative developments emphasizing the need for substantial advances rather than incremental progress In the 21st century Cellular Neuroscience has witnessed remarkable advancements leading to significant breakthroughs and impactful translational outcomes such as new FDA approved drugs for the treatment of some neurological diseases This progress has been driven not only by scientific breakthroughs but also by technical innovations and the use of innovative models such as humanized mouse models Moreover the potential impact of artificial intelligence AI on cellular neuroscience research is yet to be fully realized Collaborative projects that extend beyond cellular neuroscience such as the Human Brain Project and the Human Connectome Project hold great promise in enhancing our understanding of the human brain Despite several paradigm shifts many neural functions remain poorly understood leaving ample room for major discoveries in brain science

Recent Advances in Psychiatry from Psycho-Neuro-Immunology Research: Autoimmunencephalitis, Autoimmune-Encephalopathy, Mild Encephalitis Karl Bechter,David Brown,Souhel Najjar,2019-08-12 Growing evidence derived from cerebrospinal fluid CSF neuropathological imaging genetic and epidemiological studies link neuroinflammation and immune dysregulation to a subset of individuals with a variety of severe mental disorders SMDs including affective and non affective psychotic disorders Further the recent discoveries of neuronal surface antibodies NSAs in autoimmune encephalitis AE presenting with diverse neuropsychiatric disorders such as psychosis and cognitive decline among many others provides further support to the notion that CNS autoimmunity and neuroinflammation can contribute to the neurobiology of psychiatric disturbances Further these immune mechanisms may contribute to a subset of patients currently diagnosed as having treatment resistant SMDs such as schizophrenia and major depressive disorder Additionally mounting data indicate that various infections can serve as an immunological trigger of aberrant immune responses presumably by causing release of excess neural antigen thereby giving rise to NSAs or aberrant

immune cellular responses to give rise to primary or secondary psychiatric disorders such as schizophrenia and those associated with AE respectively Collectively these findings support the mild encephalitis hypothesis of SMD The significant overlap among AE associated psychosis systemic autoimmune disorder associated psychosis and psychotic disorders associated with pathological processes involving inflammation and immune dysregulation has also prompted some authors to adopt the term autoimmune psychosis AP This term reflects that this psychosis subtype is mechanistically linked to complex neuroimmune and inflammatory signalling abnormalities that can be responsive to early immunomodulatory treatment It also suggests that a subset of AP might represent an incomplete or forme fruste subtype of AE presenting with dominant or pure psychiatric symptoms mimicking primary psychiatric illnesses Because data indicate that delayed diagnosis and treatment may lead to permanent sequelae early recognition of AP utilizing neurodiagnostic workup e g CSF analysis neuroimaging and EEG and its early treatment with appropriate immunotherapy are paramount to a meaningful recovery This eBook will provide an overview of the current knowledge and research areas from epidemiology risk factors and diagnosis to the management of these conditions in this rapidly emerging field helping to bridge the gaps in knowledge that currently exist in the disciplines of Psychiatry Neurology and Neuroimmunology Neurobiology of Huntington's Disease Donald C.
