Kaplan, 2005-09-01 Although there appears to be a general understanding that the human brain functions similarly in women and in men an increasing body of knowledge indicates that neuronal connectivity recruitment and disease patterns exhibit gender differences There are clear gender differences in genetic expression physiologic function metabolism hormonal makeup and psychosocial profile which often modify the clinical expression of neurologic and other diseases In addition ethnic cultural and economic factors are frequently overlooked in dealing with health problems of women even though they undoubtedly have a strong influence on the clinical course of the illness The second edition of Neurologic

aquatic environment **Prolactin** György M. Nagy, Bela E. Toth, 2013-01-23 Prolactin is a polypeptide hormone that is synthesized in and secreted from the lactotrophs of the anterior pituitary gland. We are now aware that synthesis and secretion of prolactin is not restricted to the anterior lobe of the pituitary gland but other organs and individual cells can also produce it. This book provides the headlines to follow a course of cumulated knowledge on prolactin research during the last two three decades and it may also help us understand some of the concerns that we face today Endocrine Disruptors and The Developing Brain Andrea C. Gore, Sarah Dickerson, 2012-05-01 The field of endocrine disruption has been the focus of increasing attention from scientists and the general public in the past 30 years amidst concerns that exposure to environmental chemicals with the potential to alter endocrine system function known as endocrine disrupting chemicals EDCs may be contributing to an overall decline in wildlife populations and the reproductive health of humans. These concerns are based on observations of adverse effects of EDCs on marine and land animals, an increased incidence of reproductive and endocrine disease in humans, epidemiological evidence for links between body burden and disease and endocrine disruption in laboratory animals following exposure to EDCs. Owing to its role in regulation of endocrine function as well as its responsiveness to hormones, the developing brain is an especially vulnerable target for many classes of EDCs. This book will address the evidence for EDC action on the developing brain organized into 7 chapters. Topics covered include background about EDCs, evidence for exposures, concerns about EDC effects in the developing organism and particularly on the developing nervous system, how EDCs perturb the brain's neuroendocrine systems, transgenerational epigenetic effects of EDCs, EDC effects on non reproductive behaviors and future perspectives. This is the first book completely dedicated to understanding links between EDCs and the developing brain, an area of emerging importance for human health.

It covers all aspects of hormones: their chemical structure and biological synthesis; the major physiological systems in which they operate; the cellular and subcellular site of their action; the nature of the signal transduction mechanisms used in the hormone's action; and the biological consequences of an excess or deficiency of the hormone. Each contributor is an expert in his or her field and has been recruited by one of 14 Associate Editors. The 300 articles that comprise this encyclopedia are arranged alphabetically. Each entry begins with a glossary of key terms that are compiled into a complete glossary for the entire work. Additionally, each entry includes 10-15 recent references to provide the reader with an entry into the scientific literature. The Encyclopedia of Hormones is sure to be a valuable reference work for students and professional researchers interested in any aspect of the control of biological systems by hormonal signals. The only source available with such comprehensive descriptions of hormones, their receptors and their mechanisms of action. Full coverage including vertebrate, invertebrate and plant hormones.
