Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29 The 12th DEXA 2001 International Conference on Database and Expert Systems Applications was held on September 3-5, 2001 at the Technical University of Munich, Germany. The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms: DaWaK conference, EC Web conference, and DEXA workshop, which were all held in parallel with the DEXA conference in Munich. In your hands are the results of much effort beginning with the preparation of the submitted papers. The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program. All this culminated in the conference itself. A total of 175 papers were submitted to this conference and I would like to thank all the authors. They are the real base of the conference. The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2.84 reports per paper and selected 93 papers for presentation. Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences, an increase can be recognized in the areas of XMS, databases, active databases, and multi- and hypermedia efforts. The space devoted to the more classical topics such as information retrieval, distribution, and Web aspects and transaction indexing and query aspects has remained more or less unchanged. Some decrease is visible for object orientation.

Database Systems for Advanced Applications Kian Lee Tan, Vilas Wuwongse, 2006-04-05 This book constitutes the refereed proceedings of the 11th International Conference on Database Systems for Advanced Applications (DASFAA 2006) held in Singapore in April 2006. 46 revised full papers and 16 revised short papers presented were carefully reviewed and selected from 188 submissions. Topics include sensor networks, subsequence matching and repeating patterns, spatial-temporal databases, data mining, XML compression and indexing, XPath query evaluation, uncertainty and streams, peer-to-peer and distributed networks, and more.

Patterns for Data-Driven Web Apps Yannis Papakonstantinou, 2012-09-15 Modern web applications offer elegant and intuitive interfaces to data-driven business processes, but the power of such Web 2.0 data-driven applications comes at an increased development and maintenance cost. Technologies such as web service APIs, rich JavaScript, HTML5 components, and disparate mobile and tablet platforms require many lines of glue code to interface between multiple layers, subsystems, and languages. This book provides web architects and developers with clean Model-View-Controller patterns along with valuable information on technologies that reduce interfacing code between layers. Together, these patterns and technologies lead to rapid development, modular applications, and effective code management.

The World Wide Web and Databases Dan Suciu, Gottfried Vossen, 2003-06-29 With the development of the World Wide Web, data management problems have branched out from the traditional framework in which tabular data is processed under the strict control of an application and address today the rich variety of information that is found on the Web, considering a variety of environments under which such

data can be searched classified and processed Database systems are coming forward today in a new role as the primary backend for the information provided on the Web Most of today's Web accesses trigger some form of content generation from a database while electronic commerce often triggers intensive DBMS based applications The research community has begun to revise data models query languages data integration techniques indexes query processing algorithms and transaction concepts in order to cope with the characteristics and scale of the data on the Web New problems have been identified among them goal oriented information gathering management of semi structured data or database style query languages for Web data to name just a few The International Workshop on the Web and Databases WebDB is a series of workshops intended to bring together researchers interested in the interaction between databases and the Web This year's WebDB 2000 was the third in the series and was held in Dallas Texas in conjunction with the ACM SIGMOD International Conference on Management of Data

Proceedings of the Fifth Symposium on Software Reusability, SSR'99, 1999 Databases in Telecommunications II Willem Jonker, 2003-06-30 Just like the previous workshop at VLDB 1999 in Edinburgh the purpose of this workshop is to promote telecom data management as one of the core research areas in database research and to establish a strong connection between the telecom and database research communities As I wrote in the preface of those proceedings data management in telecommunications is an interesting area of research given the fact that both service management and service provisioning are very data intensive and pose extreme requirements on data management technology Given the feedback on the previous workshop we decided to keep the same program set up for this workshop an invited speaker a collection of research papers and a panel discussion We received 18 good quality papers from which we selected 12 to construct a very interesting program The program has been divided into four sections The first section focuses on CDR data warehouse and data mining technology Data warehousing and data mining around customer usage data remains an important area of interest for telecommunication operators The growing competition especially in the mobile market means that operators have to put more effort into customer retention and satisfaction The second section focuses on performance issues around databases in telecommunication Since telecommunication databases are characterized by their extreme requirements for example in terms of volumes of data to be processed or response times high volume data management and embedded and real time data management are key aspects of the telecommunication data management problems in today's operational environments
