Principles and Practice of Geriatric Surgery Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2013-06-29 More than two decades ago in response to the special healthcare needs of the aging American population interest in the field of geriatric medicine began to grow and blossom in the United States In 1984 and 1985 under the editorial leadership of Christine K Cassel and William R Hazzard respectively two major textbooks devoted to the medical care of aged patients were published These scholarly comprehensive texts provided insight into the principles of aging and guidance in the care of the geriatric patient Three editions later the need to understand the special issues involved in the medical care of the elderly is widely accepted by internists primary care providers and medical specialists For the editors of this book the special issues involved in the surgical care of the elderly have been apparent for nearly as long Although there have been a few scholarly texts on the subject including one in 1990 by Mark R Katlic general acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged This is not the result of a proportionately smaller number of older patients with surgical disease because cancer cardiovascular disease and orthopedic problems are diseases of the aged It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations In the past such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate

Sense and Senility: The Neuropathology of the Aged Human Brain David M.A. Mann, 2012-12-06 nly two things are certain in life one is that all of us will inevitably grow older the other is that at some point during or at the end of this process we shall die Inherent to the passage of time is a deterioration in the structural and functional integrity of our bodies this progressing to such an extent that one or more organ systems will eventually begin to fail with the continued health and well being of the individual coming under threat

Age associated deficiencies in the musculo skeletal cardiovascular or endocrine systems producing arthritis hypertension stroke or diabetes are all too apparent in our elderly population yet internally caused failures in the function of the nervous system provide the common and mostly intractable problems of memory and intellect or locomotion that face and frustrate clinicians Perhaps the most important factor which can decide the outcome of research studies professing to examine the effects of the passage of time i e the process of aging on the function of the nervous system or indeed any other organ system is the selection of appropriate or representative subjects for investigation The heart of this problem lies in defining what might be considered as normal aging as distinct from age associated disease setting the goal posts of normality continues to be a matter of considerable debate

Forensic Neuropathology Jan E. Leestma, Sanford Bon, 2008-10-14 Over the past 30 years as both forensic pathology and neuropathology have grown in sophistication the two specialties have forged a heightened level of interaction Reflecting the vast increase in knowledge and scientific progress in the past two decades Forensic Neuropathology Second Edition examines the new developments that have arisen since

Neuroendocrinology of Aging Joseph Meites, 2012-12-06 JOSEPH MEITES The idea that the endocrine system is involved in aging processes is as old as the beginnings of endocrinology The first endocrine experiment related to aging was reported by Brown Sequard who is usually regarded as the father of endocrinology In 1889 at the age of 72 years he reported that he had succeeded in rejuvenating himself by injections of testicular extracts from dogs and guinea pigs Although the favorable effects observed may have been due mainly to the powers of auto suggestion his reports created a considerable interest in endocrinology and its relation to aging and eventually led to the use of estrogens for treating certain pre and postmenopausal symptoms in women and androgens for treating some symptoms in aging men Up to about the 1960 s the relatively few studies on endocrine aging relationships dealt mainly with changes in weight and histological appearance of endocrine organs in aging animals and human subjects and included a limited number of measurements of endocrine function by bioassays and chemical for steroids procedures Within these limitations gerontological investigators were unable to establish any definite relationships between endocrine functions and aging processes with the exception of the connection between reproductive decline and gonadal and pituitary activity

Toxicity Bibliography, 1972 **Geriatric Anesthesiology** J. G. Reves, Sheila Ryan Barnett, Julie R. McSwain, G. Alec Rooke, 2017-10-27 Surgical and anesthetic techniques have evolved to allow a growing number of older adults to undergo surgery and current estimates are that 50% of Americans over the age of 65 years old will have an operation However as the knowledge regarding perioperative care of the elderly surgical patient grows so do the questions In this edition each chapter includes a section entitled Gaps in Our Knowledge meant to highlight areas in which research is needed as well as hopefully inspire readers to begin solving some of these questions themselves Building upon the strong foundation of the first two

editions Geriatric Anesthesiology 3rd edition also assembles the most up to date information in geriatric anesthesia and provides anesthesiologists with important new developments Topics covered include several new chapters that reflect the evolution of multidisciplinary geriatric care throughout the perioperative continuum as well as the growing body of literature related to prehabilitation In addition discussion of the surgeon s perspective and geriatrician s perspective on surgery in the geriatric population is covered as well as the systematic physiologic changes associated with aging and the pharmacologic considerations for the geriatric patient undergoing procedures Finally the last section discusses postoperative care specific to the geriatric population including acute pain management ICU management recent evidence and up to date practice regarding delirium and postoperative cognitive dysfunction and palliative care
