Review Encyclopedia of Consciousness William P. Banks, 2009-03-26 Consciousness has long been a subject of interest in philosophy and religion but only relatively recently has it become subject to scientific investigation Now more than ever before we are beginning to understand this mental state Developmental psychologists understand when we first develop a sense of self neuropsychologists see which parts of the brain activate when we think about ourselves and which parts of the brain control that awareness Cognitive scientists have mapped the circuitry that allows machines to have some form of self awareness and neuroscientists investigate similar circuitry in the human brain Research that once was separate inquiries in discreet disciplines is converging List serves and small conferences focused on consciousness are proliferating New journals have emerged in this field A huge number of monographs and edited treatises have recently been published on consciousness but there is no recognized entry point to the field no comprehensive summary This encyclopedia is that reference Organized alphabetically by topic coverage encompasses a summary of major research and scientific thought regarding the nature of consciousness the neural circuitry involved how the brain body and world interact and our understanding of subjective states The work includes contributions covering neuroscience psychology philosophy and artificial intelligence to provide a comprehensive backdrop to recent and ongoing investigations into the nature of conscious experience from a philosophical psychological and biological perspective **The Sentient Pathway** Ben Sowter, Kim Sowter, 2018-11-01 Your intuition

The Ancient Origins of Consciousness Todd E. Feinberg, Jon M. Mallatt, 2017-09-08 How consciousness appeared much earlier in evolutionary history than is commonly assumed and why all vertebrates and perhaps even some invertebrates are conscious How is consciousness created When did it first appear on Earth and how did it evolve What constitutes consciousness and which animals can be said to be sentient In this book Todd Feinberg and Jon Mallatt draw on recent scientific findings to answer these questions and to tackle the most fundamental question about the nature of consciousness how does the material brain create subjective experience After assembling a list of the biological and neurobiological

features that seem responsible for consciousness and considering the fossil record of evolution Feinberg and Mallatt argue that consciousness appeared much earlier in evolutionary history than is commonly assumed About 520 to 560 million years ago they explain the great Cambrian explosion of animal diversity produced the first complex brains which were accompanied by the first appearance of consciousness simple reflexive behaviors evolved into a unified inner world of subjective experiences From this they deduce that all vertebrates are and have always been conscious not just humans and other mammals but also every fish reptile amphibian and bird Considering invertebrates they find that arthropods including insects and probably crustaceans and cephalopods including the octopus meet many of the criteria for consciousness The obvious and conventional wisdom shattering implication is that consciousness evolved simultaneously but independently in the first vertebrates and possibly arthropods more than half a billion years ago Combining evolutionary neurobiological and philosophical approaches allows Feinberg and Mallatt to offer an original solution to the hard problem of consciousness
