The Patterned Peatlands of Minnesota Herbert Edgar Wright, Barbara Coffin, Norman E. Aaseng, 1992 The first in depth examination of the ecological and political significance of the patterned peatlands of Minnesota one of the largest peatland complexes in the world Research conducted during the past decade has unraveled many secrets of the intricate peatland ecosystem unique because it has been so little altered by human action and remarkable for its display of the complex adjustment of living organisms to their environment. The book describes the flora vegetation and animal life of the different patterned peatlands and considers the role of surface water and ground water in the development and differentiation of fens and raised bogs Specific chapters explore the role of mammals birds and amphibians and reptiles in the peatland ecosystem A rich deposit of knowledge in the form of this book a comprehensive treatment of the largest peatland area in the 48 contiguous United States The editors of The Patterned Peatlands of Minnesota have organized its 19 chapters around five major themes vegetation including development The Patterned Peatlands of Minnesota the culmination of the efforts of all these scientists establishes a benchmark for North American peatland ecology Science For all those who have any kind of interest in peatlands it ought to be very inspiring to have a book like this one which is well illustrated easy to read and has a broad and comprehensive approach to ecology development management and land use of peatlands The knowledge presented is of great interest for scientists all over the world who desire condensed and easily accessible information about these unique peatlands Journal of Quaternary Science **The Ecology of Patterned Boreal Peatlands** The Ecology of Patterned Boreal Peatlands of Northern Minnesota Paul H. of Northern Minnesota Paul H. Recommendations for the Protection of Ecologically Significant Peatlands in Minnesota Minnesota. Department of Natural Resources,1984 Wetland Plants and Plant Communities of Minnesota & Wisconsin Steve D.

Eggers, Donald M. Reed,1988 The wetlands of Minnesota and Wisconsin are categorized into fifteen plant communities Each community is described and illustrated by color photographs along with descriptions and color photographs of a total of 115 representative plant species The descriptions include taxonomic characteristics habitat and notes on wildlife use and economic values The Ecology of Patterned Boreal Peatlands of Northern Minnesota Paul H. Glaser,1987 The Biology of Peatlands, 2e Håkan Rydin, John K. Jeglum,2013-07-18 Peatlands form important landscape elements in many parts of the world and play significant roles for biodiversity and global carbon balance This new edition has been fully revised and updated documenting the latest advances in areas such as microbial processes and relations between biological processes and hydrology As well as thoroughly referencing the latest research the authors expose a rich older literature where an immense repository of natural history has accumulated The Biology of Peatlands starts with an overview of the main peatland types marsh swamp fen and bog before examining the entire range of biota present microbes invertebrates

plants and vertebrates together with their specific adaptations to peatland habitats Detailed coverage is devoted to the genus Sphagnum the most important functional plant group in northern peatlands although tropical and southern hemisphere peatlands are also covered Throughout the book the interactions between organisms and environmental conditions especially wetness availability of oxygen and pH are emphasized with chapters on the physical and chemical characteristics of peat the role of peat as an archive of past vegetation and climate and peatland succession and development Several other key factors and processes are then examined including hydrology and nutrient cycling The fascinating peatland landforms in different parts of the world are described together with theories on how they have developed Human interactions with peatlands are considered in terms of management conservation and restoration A final chapter new to this edition focuses on the role of peatlands as sources or sinks for the greenhouse gases carbon dioxide and methane and the influences of climate change on peatlands This timely and accessible text is suitable for students and researchers of peatland ecology as well as providing an authoritative overview for professional ecologists and conservation biologists **Peatlands** I.P. Martini.A. Martinez Cortizas, W. Chesworth, 2007-03-28 In the past two decades there has been considerable work on global climatic change and its effect on the ecosphere as well as on local and global environmental changes triggered by human activities From the tropics to the Arctic peatlands have developed under various geological conditions and they provide good records of global and local changes since the Late Pleistocene The objectives of the book are to analyze topics such as geological evolution of major peatlands basins peatlands as self sustaining ecosystems chemical environment of peatlands water and peat chemistry peatlands as archives of environmental changes influence of peatlands on atmosphere circular complex interactions remote sensing studies of peatlands peatlands as a resource peatlands degradation restoration plus more Presents an interdisciplinary approach with an emphasis on Earth Science and addresses the need for intergration between subdisciplines and the developing of new approaches Synthesizes the evolutionary ecological and chemical characteristics of major peatlands as well as focuses on the environmental changes from climate changes to surface ares changes due to human activities Covers topical studies of worldwide interest and provides examples from many different countries
