CAD/CAM Robotics and Factories of the Future '90 Suren N. Dwivedi, Alok K. Verma, John E. Sneckenberger, 2012-12-06 According to the Concurrent Engineering Research Center CERC at West Virginia University the

concurrent engineering CE is a rapid simultaneous approach where research and development design manufacturing and support are carried out in parallel The mission of concurrent engineering is to reduce time to market improve total quality and lower cost for products or systems developed and supported by large organizations The purpose of the concurrent design methodology is to let the designer know the consequences of his design decisions in the manufacturing and assembly stages as well as in subsequent operations Design for manufacture and assembly design for reliability and testability CAD CAM CAE knowledge based systems cost analysis and advanced material technology are the major constituents of concurrent engineering The need for concurrent engineering can be justified from the fact that in every production cycle the design phase approximately takes 5 to 10% of the total cycle but overall it influences 80% of the production cycle This volume contains articles from a wide spectrum dealing with concepts of concurrent engineering The importance of the knowledge based systems in the CE environment is significant as they provide the common platform to achieve the same level of expertise to the designers and manufacturers throughout the organization for the specific task Their role in do it right the first time is very important in providing aid to the designers and manufacturers to optimize the design and manufacturing setups for a cost effectiveness and reduced production time

Design of Industrial Information Systems Thomas Boucher, Ali Yalcin, 2010-07-26 Design of Industrial Information Systems presents a body of knowledge applicable to many aspects of industrial and manufacturing systems New software systems such as Enterprise Resource Planning and new hardware technologies such as RFID have made it possible to integrate what were separate IT databases and operations into one system to realize the greatest possible operational efficiencies This text provides a background in and an introduction to the relevant information technologies and shows how they are used to model and implement integrated IT systems With the growth of courses in information technology offered in industrial engineering and engineering management programs the authors have written this book to show how such computer based knowledge systems are designed and used in modern manufacturing and industrial companies Introduces Data Modeling and Functional Architecture Design with a focus on integration for overall system design Encompasses hands on approach employing many in chapter exercises and end of chapter problem sets with case studies in manufacturing and service industries Shows the reader how Information Systems can be integrated into a wider E business Web Enabled Database business model Offers applications in Enterprise Resource Planning ERP and Manufacturing Execution Systems MES
