Monocultures Mind Perspectives Biodiversity Biotechnology:

Monocultures of the Mind Vandana Shiva, 1993-02 Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy the environment and the position of women in society coincide In this new volume she brings together her thinking on the protection of biodiversity the implications of biotechnology and the consequences for agriculture of the global pre eminence of Western style scientific knowledge In lucid and accessible fashion she examines the current threats to the planet s biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production She shows how the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi tech interests making money out of the new biotechnologies She explains what these technologies involve and gives examples of their impact in practice She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed Underlying her arguments is the view that the North s particular approach to scientific understanding has led to a system of monoculture in agriculture a model that is not being foisted on the South displacing its societies ecologically sounder indigenous and age old experiences of truly sustainable food cultivation forest management and animal husbandry This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of people disrupting the social systems that provide them with security and dignity and will ultimately result in a sterile planet in both North and South In a policy intervention of potentially great significance she calls instead for a halt at international as well as local level to the aid and market incentives to both large scale destruction of habitats where biodiversity thrives and the introduction of centralised homogenous systems of cultivation

Gary Bryner, *The Historical Dictionary of Environmentalism* strategically skips across issues concepts time organizations and cultures not with any pretense of producing a definitive dictionary but rather with the aim of producing an inclusive wide ranging and global history of environmentalism This is done through a chronology a list of acronyms and abbreviations an introductory essay and over 300 cross referenced dictionary entries

Food Biotechnology in Ethical Perspective Paul B. Thompson, 2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson s path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate between United States and European perspectives

on biotechnology Thompson's unique and insightful approach to addressing the risks and questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change. The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system.

The SAGE Handbook of Intellectual Property Matthew David, Debora Halbert, 2014-11-18 This Handbook brings together scholars from around the world in addressing the global significance of controversies over and alternatives to intellectual property. IP today. It brings together over fifty of the leading authors in this field across the spectrum of academic disciplines from law, economics, geography, sociology, politics, and anthropology. This volume addresses the full spectrum of IP issues including copyright, patent, trademarks, and trade secrets, as well as parallel rights and novel applications. In addition to addressing the role of IP in an increasingly information-based and globalized economy and culture, it also challenges the utility and viability of IP today and addresses a range of alternative futures.

I Think Therefore I Eat Martin Cohen, 2018-11-13 The worst thing about food science, the elephant in the room, is that it's not just the opinions that are changing, but the facts themselves shift too. Did you know that the great philosophers were the original foodies? To eat or not to eat. That's an easy question to answer. But what to eat? That's a deep and profoundly difficult one. Doctors and nutritionists often disagree with each other while celebrities and scientists keep pitching us new recipes and special diets. No one thought to ask the philosophers, those rational souls devoted to truth, ethics, and reason, what they think. Until now.

Genetically Modified Foods Salah E. O. Mahgoub, 2016-04-19 An increasingly hot button issue, genetically modified (GM) food is considered by some as the best way to feed the world's growing population and by others as an experiment gone wrong on the unsuspecting public. *Genetically Modified Foods: Basics, Applications, and Controversy* details the basics of biotechnology and its applications in the laboratory.

Culture and the Changing Environment Michael J. Casimir, 2009 Today human ecology has split into many different sub disciplines such as historical ecology political ecology or the New Ecological Anthropology The latter in particular has criticised the predominance of the Western view on different ecosystems arguing that culture specific world views and human environment interactions have been largely neglected However these different perspectives only tackle specific facets of a local and global hyper complex reality In bringing together a variety of views and theoretical approaches these especially commissioned essays prove that an interdisciplinary collaboration and understanding of the extreme complexity of the human environment interface is possible

The Global Food Economy Tony Weis, 2008-12-08 The Global Food Economy examines the human and ecological cost of what we eat The current food economy is characterized by immense contradictions Surplus food mountains bountiful supermarkets and rising levels of obesity stand in stark contrast to widespread hunger and

malnutrition Transnational companies dominate the market in food and benefit from subsidies whilst farmers in developing countries remain impoverished Food miles mounting toxicity and the ecological hoofprint of livestock mean that the global food economy rests on increasingly shaky environmental foundations This book looks at how such a system came about and how it is being enforced by the WTO Ultimately Weis considers how we can find a way of building socially just ecologically rational and humane food economies *Earth Governance* Klaus Bosselmann,2015-07-31 The predicament of uncontrolled growth in a finite world puts the global commons such as oceans atmosphere and biosphere at risk So far states have not found the means to protect what essentially is outside their jurisdiction However the ju **Biogenetic Paradoxes of the Nation** Sakari Tamminen,2019-11-22 In 1992 the Convention on Biological Diversity CBD signed by over 160 countries and hailed as the key symbol of a common vision for saving Earth s biodiversity set forth three primary mandates preserving biodiversity using biodiversity components sustainably and enabling economic benefit sharing The CBD which gave signatory countries the ability to claim sovereignty over nonhuman genetic resources native to each nation defined biodiversity through a politics of nationhood in ways that commodified genetic resources In *Biogenetic Paradoxes of the Nation* Sakari Tamminen traces the ways in which the CBD s seemingly compatible yet ultimately paradox ridden aims became manifest in efforts to create conserve and capitalize on distinct animal and plant species In using Finland as a case study with which to understand the worldwide efforts to convert species into manifestations of national identity Tamminen shows how the CBD s policies contribute less to biodiversity conservation than to smoothing the way for frictionless operation of biotechnologically assisted circuits of the global bioeconomy Tamminen demonstrates how an intimate look at the high level politics and technical processes of defining national genetic resources powerfully illuminates the limits of anthropocentric biopolitical theory

Traditional and Indigenous Knowledge for the Modern Era David R. Katerere,Wendy Applequist,Oluwaseyi M. Thompson, 2020-11-09 This 3rd edition of Food and Agricultural Biotechnology in Ethical Perspective updates Thompson's analysis to reflect the next generation of biotechnology including synthetic biology gene editing and gene drives The first two editions of this book published as Food Biotechnology in Ethical Perspective in 1997 and 2007 were the first comprehensive philosophical studies of genetic engineering applied to food systems The book is structured with chapter length treatments of risk in four categories food safety to animals to the environment and socio economic risks These chapters are preceded by two chapters providing orientation to the uses of gene technology in food and agriculture and to the goals methods and background assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property debates 2 religious metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised *Ecological Relations* Susan Board, 2003-08-29 International relations IR traditionally theorises the social relationships between different peoples In so doing it ignores the ecological bases to life the ground upon which we walk the all encompassing bind of nature In the current climate of environmental degradation international relations as a theory must in turn be altered By broadening the term relations to include this ecological framework international relations can be approached from a changed perspective In this book Susan Board uses a Foucauldian model of power to expand the boundaries of international relations She argues that relations can include other people or animals and are not exclusively between states Such a perspective acts to denaturalise the marginalization of women animals and indigenous peoples and hence expand the constrained discipline of IR By rethinking international relations to put ecological foundations first we are pushed to think and act with consideration of the long term sustainability of the global environment an ecological focus reminds us of our interdependence with our environment and all our neighbours The book raises conceptual and methodological issues that go directly to the heart of current critical engagements within the discipline of IR As such it will be of great interest to students and researchers in IR environmental politics and political theory Anthropocene Feminism

Richard Grusin, 2017-03-21 What does feminism have to say to the Anthropocene How does the concept of the Anthropocene impact feminism This book is a daring and provocative response to the masculinist and techno normative approach to the Anthropocene so often taken by technoscientists artists humanists and social scientists By coining and for the first time fully exploring the concept of anthropocene feminism it highlights the alternatives feminism and queer theory can offer for thinking about the Anthropocene Feminist theory has long been concerned with the anthropogenic impact of humans particularly men on nature Consequently the contributors to this volume explore not only what current interest in the Anthropocene might mean for feminism but also what it is that feminist theory can contribute to technoscientific understandings of the Anthropocene With essays from prominent environmental and feminist scholars on topics ranging from Hawaiian poetry to Foucault to shelled creatures to hypomodernity to posthuman feminism this book highlights both why we need an anthropocene feminism and why thinking about the Anthropocene must come from feminism Contributors Stacy Alaimo U of Texas at Arlington Rosi Braidotti Utrecht U Joshua Clover U of California Davis Claire Colebrook Pennsylvania State U Dehlia Hannah Arizona State U Myra J Hird Queen s U Lynne Huffer Emory U Natalie Jeremijenko New York U Elizabeth A Povinelli Columbia U Jill S Schneiderman Vassar College Juliana Spahr Mills College Alexander Zahara Queen s U
