Carder,2013-04-17 The aim of the present book has been to provide an outline the first of its kin of the history of the human efforts to map the topography of the surface of our satellite from the days of pre telescopic astronomy up to the present These efforts commenced modestly at the time when the unaided eye was still the only tool at the disposal of men interested in the face of our satellite and were continued since for more than three centuries by a small band of devoted friends of the Moon in several countries Many of these were amateur astronomers and almost all were amateur cartographers though some highly skilled in their art The reader interested in the history of lunar mapping between 1600 and 1960 will find its outline in the first chapter of this book and can follow the way in which the leadership in the mapping of the Moon the cradle of which stood in Italy passed successively to France Germany and eventually to the United States All efforts described in this chapter were wholly superseded by subsequent developments since 1960 largely motivated by logistic needs of a grand effort which culminated with repeated manned landings on the Moon between 1969 1972 a feat which will remain for ever one of the glories of our century **New Guide to the Moon** Patrick Moore,1953 **Moon Handbook** Carl Koppeschaar,2000-03 **Maps of the Moon** Thomás A. S. Haddad,2019-12-30 When does a depiction of the moon become a lunar map This publication addresses this question from theoretical and historical standpoints It is argued that moon maps are of crucial importance to the history of cartography for they challenge established notions of what a map is how it functions what its purposes are and what kind of power it embodies and performs The publication also shows how terrestrial cartography has shaped the history of lunar mapping since the seventeenth

century through visual and nomenclature conventions the cultural currency of maps mapmakers social standing and data gathering and projection practices It further demonstrates that lunar cartography has also been organized by an internal principle that is born of the fundamental problem of how to create static map spaces capable of representing a referent that is constantly changing to our eyes as is the visible face of the moon It is suggested that moon maps may be classed in three broad categories according to the kinds of solutions for this representational problem that have been devised over the last 400 years
