Asset Management: Tools And Issues Frank J Fabozzi, Francesco A Fabozzi, Marcos Lopez De Prado, Stoyan V Stoyanov, 2020-12-02 Long gone are the times when investors could make decisions based on intuition Modern asset management draws on a wide range of fields beyond financial theory economics financial accounting econometrics statistics management science operations research optimization and Monte Carlo simulation and more recently data science Big Data machine learning and artificial intelligence The challenge in writing an institutional asset management book is that when tools from these different fields are applied in an investment strategy or an analytical framework for valuing securities it is assumed that the reader is familiar with the fundamentals of these fields Attempting to explain strategies and analytical concepts while also providing a primer on the tools from other fields is not the most effective way of describing the asset management process Moreover while an increasing number of investment models have been proposed in the asset management literature there are challenges and issues in implementing these models This book provides a description of the tools used in asset management as well as a more in depth explanation of specialized topics and issues covered in the companion book Fundamentals of Institutional Asset Management The topics covered include the asset management business and its challenges the basics of financial accounting securitization technology analytical tools financial econometrics Monte Carlo simulation optimization models and machine learning alternative risk measures for asset allocation securities finance implementing quantitative research quantitative equity strategies transaction costs multifactor models applied to equity and bond portfolio management and backtesting methodologies. The book argues that from a technical perspective there is no need for more but for better and more efficiently organized information The title demonstrates that it is possible with a single but well organized set of information and algorithms to derive all types of financial analysis This reaches far beyond classical risk and return or profitability management spanning all risk categories all valuation techniques local GAAP IFRS full mark to market and so on and static historic and dynamic analysis just to name the most important dimensions The dedication of a complete section to dynamic analysis which is based on a going concern view is unique contrasting with the static liquidation based view prevalent today in banks The commonly applied arbitrage free paradigm which is too narrow is expanded to real world market models The title starts with a brief history of the evolution of financial analysis to create the current industry structure with the organisation of many banks following a strict silo structure and finishes with suggestions for the way forward from the current financial turmoil Throughout the book the authors advocate the adoption of a unified financial language that could also be the basis for a new regulatory approach. They argue that such a language is indispensable if the

next regulatory wave which is surely to come should not end in an expensive regulatory chaos Unified Financial Analysis will be of value to CEOs and CFOs in banking and insurance risk and asset and liability managers regulators and compliance officers students of Finance or Economics or anyone with a stake in the finance industry Regulation and the Credit Rating Agencies Daniel Cash, 2018-08-06 This book examines the transgressions of the credit rating agencies before during and after the recent financial crisis It proposes that by restricting the agencies ability to offer ancillary services there stands the opportunity to limit in an achievable and practical manner the potentially negative effect that the Big Three rating agencies Standard Poor's Moody's and Fitch may have upon the financial sector and society moreover. The book contains an extensive and in depth discussion about how the agencies ascended to their current position why they were able to do so and ultimately their behaviour once their position was cemented This work offers a new framework for the reader to follow suggesting that investors issuers and the state have a desired version of the agencies in their thinking and operate upon that basis when in fact those imagined agencies do not exist as demonstrated by the actual conduct of the agencies. The book primarily aims to uncover this divergence and reveal the real credit rating agencies and then on that basis propose a real and potentially achievable reform to limit the negative effects that result from poor performance in this Industry It addresses the topics with regard to financial regulation and the financial crisis and will be of interest to legal scholars interested in the intersection between business and he law as well as researchers academics policymakers industry and professional associations and students in the fields of corporate law banking and finance law financial regulation corporate governance and corporate Life Settlements and Longevity Structures Geoff Chaplin, Jim Aspinwall, Mark Venn, 2009-08-03 Recent turbulence in the financial markets has highlighted the need for diversified portfolios with lower correlations between the different investments Life settlements meet this need offering investors the prospect of high stable returns uncorrelated with the broader financial markets This book provides readers of all levels of experience with essential information on the process surrounding the acquisition and management of a portfolio of life settlements the assessment modelling and mitigation of the associated longevity interest rate and credit risks and practical approaches to financing and risk management structures It begins with the history of life insurance and looks at how the need for new financing sources has led to the growth of the life settlements market in the United States The authors provide a detailed exploration of the mathematical formulae surrounding the generation of mortality curves drawing a parallel between the tools deployed in the credit derivatives market and those available to model longevity risk Structured products and securitisation techniques are introduced and explained starting with simple vanilla products and models before illustrating some of the investment structures associated with life settlements Capital market mechanisms available to assist the investor in limiting the risks associated with life settlement portfolios are outlined as are opportunities to use life settlement portfolios to mitigate the risks of traditional capital markets The last section of the book covers derivative products either available now or under consideration that will

reduce or potentially eliminate longevity risks within life settlement portfolios It then reviews hedging and risk management strategies and considers how to measure the effectiveness of risk mitigation Bond Markets, Analysis, and Strategies, tenth edition Frank J.
