Modeling Groundwater Flow and Contaminant Transport Jacob Bear, Alexander H.-D. Cheng, 2010-01-18 In many parts of the world groundwater resources are under increasing threat from growing demands wasteful use and contamination To face the challenge good planning and management practices are needed A key to the management of groundwater is the ability to model the movement of fluids and contaminants in the subsurface The purpose of this book is to construct conceptual and mathematical models that can provide the information required for making decisions associated with the management of groundwater resources and the remediation of contaminated aquifers The basic approach of this book is to accurately describe the underlying physics of groundwater flow and solute transport in heterogeneous porous media starting at the microscopic level and to rigorously derive their mathematical representation at the macroscopic levels The well posed macroscopic mathematical models are formulated for saturated single phase flow as well as for unsaturated and multiphase flow and for the transport of single and multiple chemical species Numerical models are presented and computer codes are reviewed as tools for solving the models The problem of seawater intrusion into coastal aquifers is examined and modeled The issues of uncertainty in model input data and output are addressed The book concludes with a chapter on the management of groundwater resources Although one of the main objectives of this book is to construct mathematical models the amount of mathematics required is kept minimal

NASA Technical Paper ,1978 **Multiphase Flow Dynamics 5** Nikolay Ivanov Koley,2011-10-18

The present Volume 5 of the successful book package Multiphase Flow Dynamics is devoted to nuclear thermal hydraulics which is a substantial part of nuclear reactor safety It provides knowledge and mathematical tools for adequate description of the process of transferring the fission heat released in materials due to nuclear reactions into its environment It step by step introduces into the heat release inside the fuel temperature fields in the fuels the simple boiling flow in a pipe described using ideas of different complexity like equilibrium non equilibrium homogeneity non homogeneity Then the simple three fluid boiling flow in a pipe is described by gradually involving the mechanisms like entrainment and deposition dynamic fragmentation collisions coalescence turbulence All heat transfer mechanisms are introduced gradually discussing their uncertainty Different techniques are introduced like boundary layer treatments or integral methods Comparisons with experimental data at each step demonstrate the success of the different ideas and models After an introduction of the design of the reactor pressure vessels for pressurized and boiling water reactors the accuracy of the modern methods is demonstrated using large number of experimental data sets for steady and transient flows in heated bundles Starting with single pipe boiling going through boiling in the rod bundles the analysis of complete vessel including the reactor is finally demonstrated Then a powerful method for nonlinear stability analysis of flow boiling and condensation is introduced Models are presented and their accuracies are investigated for describing critical multiphase flow at different level of complexity Basics of designing of steam generators moisture separators and emergency condensers are presented Methods for analyzing a complex pipe network flows with components like pumps valves etc are also presented Methods for analysis of important aspects of the severe accidents like melt water interactions external cooling and cooling of layers of molten nuclear reactor material are presented Valuable sets of thermo physical and transport properties for severe accident analysis are presented for the following materials uranium dioxide zirconium dioxide stainless steel zirconium aluminum aluminum oxide silicon dioxide iron oxide molybdenum boron oxide reactor corium sodium lead bismuth and lead bismuth

eutectic alloy The emphasis is on the complete and consistent thermo dynamical sets of analytical approximations appropriate for computational analysis Therefore the book presents a complete coverage of the modern Nuclear Thermal Hydrodynamics This present second edition includes various updates extensions improvements and corrections This present second edition includes various updates extensions improvements and corrections *Numerical Methods in Turbulence Simulation* Robert Moser, 2022-11-30 Numerical Methods in Turbulence Simulation provides detailed specifications of the numerical methods needed to solve important problems in turbulence simulation Numerical simulation of turbulent fluid flows is challenging because of the range of space and time scales that must be represented This book provides explanations of the numerical error and stability characteristics of numerical techniques along with treatments of the additional numerical challenges that arise in large eddy simulations Chapters are written as tutorials by experts in the field covering specific both contexts and applications Three classes of turbulent flow are addressed including incompressible compressible and reactive with a wide range of the best numerical practices covered A thorough introduction to the numerical methods is provided for those without a background in turbulence as is everything needed for a thorough understanding of the fundamental equations The small scales that must be resolved are generally not localized around some distinct small scale feature but instead are distributed throughout a volume These characteristics put particular strain on the numerical methods used to simulate turbulent flows Includes a detailed review of the numerical approximation issues that impact the simulation of turbulence Provides a range of examples of large eddy simulation techniques Discusses the challenges posed by boundary conditions in turbulence simulation and provides approaches to addressing them *Heat Transfer Equipment Design* R. K. Shah, Eleswarapu Chinna Subbarao, R. A. Mashelkar, 1988-07-01 *Safety Ethics* Manoj S. Patankar, 2020-04-27 Much of the previous literature in the field of safety focuses on either the technical equipment issues or the human performance factors that contribute to the active failures in safety critical systems However this book provides guidance in the moral or ethical aspects of decision making that perpetuate many of the latent failures in safety critical systems The book provides a concise introduction to the ethical foundations and follows up with case studies from aviation healthcare and environmental and occupational health **Advances in Spatio-Temporal Analysis** Xinming Tang, Yaolin Liu, Jixian Zhang, Wolfgang Kainz, 2007-08-23 Developments in Geographic Information Technology have raised the expectations of users A static map is no longer enough there is now demand for a dynamic representation Time is of great importance when operating on real world geographical phenomena especially when these are dynamic Researchers in the field of Temporal Geographical Information Systems TGIS have been developing methods of incorporating time into geographical information systems Spatio temporal analysis embodies spatial modelling spatio temporal modelling and spatial reasoning and data mining Advances in Spatio Temporal Analysis contributes to the field of spatio temporal analysis presenting innovative ideas and examples that reflect current progress and achievements Exhaust Plume Temperature Effects on Nozzle Afterbody Performance Over

the Transonic Mach Number Range C. E. Robinson, M. Dean High, 1974 Results of an experimental and analytical research investigation on nozzle afterbody drag are presented Experimental afterbody and boattail drag coefficients and pressure distributions are discussed for an isolated strut mounted nozzle afterbody model for the Mach number range from 0.6 to 1.5 Some data are also given for free stream unit Reynolds numbers from one million to approximately four million per foot The experimental data were obtained for the basic model with an air cooled and a water cooled Ethylene air combustor to provide hot jet duplication as well as cold jet simulation The temperature of the nozzle exhaust gas was varied from 530R burner off to approximately 2500R for several nozzle pressure ratios from jet off to those corresponding to a moderately under expanded exhaust plume The initial series of experiments was conducted with the air cooled combustors and the effect of jet temperature on afterbody drag was somewhat masked by the effects of the secondary airflow from the cooling air The general trend however shows a decreasing afterbody drag with increasing exhaust gas temperature and with decreasing secondary airflow at a fixed nozzle pressure ratio Modified author abstract
