Patellar Instability Surgery In Clinical Practice

David R. Diduch

Patellar Instability Surgery In Clinical Practice:

Patellar Instability Surgery in Clinical Practice Vicente Sanchis-Alfonso, 2012-11-19 Among all the extensor mechanism pathologies lateral patellar instability is of great interest not only for the knee specialist but also for the general orthopedic surgeon and trainee The procedure that is most frequently performed to treat lateral patellar instability is the medial patellofemoral ligament MPFL reconstruction The reason for this great interest in this procedure is obvious Medial patellofemoral ligament reconstruction is the most frequently performed procedure in the extensor mechanism It also is the most predictable and has the best clinical results of all the procedures in the extensor mechanism In this handbook we analyse the different reconstruction techniques step by step for the MPFL reconstruction as well as other techniques less frequently used in the patient with lateral patellofemoral instability We also analyse the treatment of medial patellofemoral instability It is a very practical book aimed at the general orthopedic surgeon and also the ones specialized in the knee

Patellofemoral Instability Decision Making and Techniques, An Issue of Clinics in Sports Medicine, E-Book
