Pathology of Septic Shock Ernst T. Rietschel, Hermann Wagner, 2012-12-06 Severe sepsis and septic shock are the most serious complications of bacterial

infections Both gram positive and gram negative bacteria can trigger these extreme inflammatory responses and by so doing cause substantial morbidity and mortality In the United States alone over 400 000 patients suffer from septicemia each year and approximately 100 000 of these patients die despite optimal intensive care and modern antimicrobial therapy These dramatic figures have prompted intensive research to define the bacterial and host factors involved in the septic response Scientists from many disciplines including chemistry physics biology medical microbiology immunology and pharmacology have worked closely with clinicians to achieve rapid and profound progress To translate this newly acquired knowledge into clinical practice clinical trials have also been performed to evaluate numerous new therapeutic drugs The disappointing results from these trials have underscored a major lesson namely that sepsis constitutes an extremely complex syndrome and that basic and clinical research must be greatly intensified in order to illuminate its mechanisms At this stage the editors of the present volume of Current Topics in Microbiology and Immunology considered it would be rewarding to compile a volume summarizing our present basic and clinical knowledge on sepsis Our particular gratitude extends to those international experts who have followed our invitation and elaborated on particular areas of the basic and clinical aspects of this field Blood and Bone Marrow Pathology E-Book Anna Porwit,Jeffrey McCullough,Wendy N Erber,2011-05-27
