Acupuncture Therapy for Neurological Diseases Ying Xia,Xiaoding Cao,Gen-Cheng Wu,Jieshi Cheng,2010-09-08 Acupuncture therapy has been practiced in China and other Asian countries for more than two thousand years Modern clinical research has confirmed the impressive therapeutic effect of acupuncture on numerous human ailments such as controlling pain nausea and vomiting However the biological mechanisms of acupuncture are still under debate In Traditional Chinese Medicine TCM the mechanism of acupuncture therapy is explained by a meridian model According to this model acupuncture is believed to treat the diseased organs by modulating two conditions known as Yin and Yang which represent all the opposite principles that people find in the universe both inside and outside the human body Yin and Yang complement each other and are subjected to changes between each other The balance of Yin and Yang is thought to be maintained by Qi an energy substance flowing constantly through the meridian a network connecting all the organs of the body The illness according to this theory is the temporary dominance of one principle over the other owing to the blockade of the Qi from flowing through the meridian under certain circumstance The axiom of No stagnation No pain in TCM summarizes this concept Thus the goal of acupuncture treatment is to restore the balance of Yin and Yang conditions in the diseased organ s This theory has been considered to be useful to guide this ancient therapy such as carrying out diagnosis deciding on the principle and selecting the acupoints

Placebo and Pain Karin Meissner,Klaus Linde,2013-08-28 More invasive and impressive therapeutic rituals are generally believed to be more powerful interventions than less impressive ones This chapter reviews and discusses evidence from randomized clinical trials and meta analyses for such a differential effectiveness of placebo interventions Evidence from clinical research that different types of placebo are regularly associated

with different magnitudes of placebo effect is limited. However, one area where hints from a variety of sources are accumulating is sham acupuncture in the treatment of pain. Furthermore, there is preliminary evidence that sham surgery and ambiguous evidence that sham injections are associated with enhanced placebo effects on pain. Among the factors that may account for a greater effectiveness of such treatment procedures are the lively perceptual context of the procedures themselves, the attention and enhanced emotional support by healthcare providers, and the increased expectation and motivation of patients. A differential effectiveness of placebo control procedures in clinical trials would have important implications for clinical research.
