Passivity Modeling Continuous Biological Reactors:

Passivity Based Modeling and Control of Continuous Biological Reactors Mohit Makkar, 2015-12-24 This work proposes a passivity based formulation and control of a well mixed reactor model for a set of chemical and biochemical reactions Gibbs free energy is an apt Hamiltonian function for isothermal cases An energy based model of such systems is proposed which is quasi Port Hamiltonian based on physical grounds The model is taking care of the concentration space and reaction space of a chemical reaction Stoichiometric and Reaction interconnection and damping assignment passivity based controllers IDA PBC are derived from these models Control of enzymatic hydrolysis of cellulose in continuous reactor is simulated A passivity based model of a general set of microbial reactions in open reactors with new Lyapunov functions is derived A change of coordinates simplifies the number of equations to be taken care of and shows the passivity of the system The Lyapunov functions are in close proximity with the Gibbs free energy function used in Port Hamiltonian model of enzymatic reactions A general method of generating an adaptive passivity based control law which maintains the structure of the model is given Validation of the model is done on multiple reaction examples

Bioreaction Engineering Principles John Villadsen, Jens Nielsen, Gunnar Lidén, 2011-07-12 The present text is a complete revision of the 2nd edition from 2003 of the book with the same title In recognition of the fast pace at which biotechnology is moving we have rewritten several chapters to include new scientific progress in the field from 2000 to 2010 More important we have changed the focus of the book to support its use not only in universities but also as a guide to design new processes and equipment in the bio industry A new chapter has been included on the prospects of the bio refinery to replace many of the oil and gas based processes for production of especially bulk chemicals This chapter also serves to make students in Chemical Engineering and in the Bio Sciences enthusiastic about the

whole research field As in previous editions we hope that the book can be used as textbook for classes even at the undergraduate level where chemical engineering students come to work side by side with students from biochemistry and microbiology To help the chemical engineering students Chapter 1 includes a brief review of the most important parts of microbial metabolism In our opinion this review is sufficient to understand microbial physiology at a sufficiently high level to profit from the rest of the book Likewise the bio students will not be overwhelmed by mathematics but since the objective of the book is to teach quantitative process analysis and process design at a hands on level some mathematics and model analysis is needed We hope that the about 100 detailed examples and text notes together with many instructive problems will be sufficient to illustrate how model analysis is used also in Bio reaction Engineering

Water Treatment Unit Processes

David W. Hendricks, 2018-10-03 The unit process approach common in the field of chemical engineering was introduced about 1962 to the field of environmental engineering An understanding of unit processes is the foundation for continued learning and for designing treatment systems The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering Suitable for a two semester course Water Treatment Unit Processes Physical and Chemical provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice Bridging the gap between scientific principles and engineering practice the book covers approaches that are common to all unit processes as well as principles that characterize each unit process Integrating theory into algorithms for practice Professor Hendricks emphasizes the fundamentals using simple explanations and avoiding models that are too complex mathematically allowing students to assimilate principles without getting sidelined by excess calculations Applications of unit processes principles are illustrated by example problems in each chapter Student problems are provided at the end of each chapter the solutions manual can be downloaded from the CRC Press Web site Excel spreadsheets are integrated into the text as tables designated by a CD prefix Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables The spreadsheets can be downloaded from the CRC web site The book has been designed so that each unit process topic is self contained with sidebars and examples throughout the text Each chapter has subheadings so that students can scan the pages and identify important topics with little effort Problems references and a glossary are found at the end of each chapter Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information Appendices at the end of the book provide useful reference material on various topics that support the text This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems

Metal Removal and Recovery from Mining Wastewater and E-waste Leachate Suthee Janyasuthiwong, 2020-02-18 Metal

contamination in the environment is a persisting global issue. The metal reservoirs in the earth have declined due to society's needs and due to uncontrolled mining activities. Therefore, the idea to recover metals from waste streams has emerged. In this thesis, cost competitive technologies such as adsorption using agro wastes and precipitation using an inverse fluidized bed (IFB) reactor were investigated with special emphasis on the recovery of base metals. Groundnut shell showed good potential for metal Cu, Pb and Zn removal. From artificial neural network modeling, the performance of the sulfate reducing bacteria (SRB) was found to be strongly pH dependent. The removal efficiency of Cu and Zn in the IFB at pH 5.0 was 97%. Electronic waste is a good candidate as secondary metal resource. The recovery of Cu from computer printed circuit boards (PCBs) using biogenic sulfide precipitation was investigated as well. Using this technology, Cu could be recovered at 0.48 g Cu/g PCBs.

Environmental Biotechnology Daniel A. Vallero, 2015-09-11. Environmental Biotechnology: A Biosystems Approach, Second Edition presents valuable information on how biotechnology has acted as a vital buffer among people, pollution and the environment. It answers the most important questions on the topic, including how and why a knowledge and understanding of the physical, chemical and biological principles of the environment must be achieved in order to develop biotechnology applications. Most texts address either the applications or the implications of biotechnology. This book addresses both. The applications include biological treatment and other environmental engineering processes. The risks posed by biotechnologies are evaluated from both evidence based and precautionary perspectives. Using a systems biology approach, the book provides a context for researchers and practitioners in environmental science that complements guidebooks on the necessary specifications and criteria for a wide range of environmental designs and applications. Users will find crucial information on the topics scientific researchers must evaluate in order to develop further technologies. Provides a systems approach to biotechnologies which includes the physical, biological and chemical processes in context. Presents relevant case studies on cutting edge technologies such as nanobiotechnologies and green engineering. Addresses both the applications and implications of biotechnologies by following the lifecycle of a variety of established and developing biotechnologies. Includes crucial information on the topics scientific researchers must evaluate in order to develop further technologies.
