Digital Transformation with BPM Nathaniel Palmer, Connie Moore, Kerry M. Finn, Kay Winkler, Neil-Ward-Dutton, Frank Kowalkowski, Keith D Swenson, 2019-10-24 BPM is essential to a company's survival in today's hyper speed business environment. The goal of Digital Transformation is to help empower enterprises to compete at the highest level in any marketplace. This book provides compelling award winning case studies contributed by those who have been through the full BPM experience. The case studies describe the processes involved to generate successful ROIs and competitive advantages. Digital transformation describes the changes associated with the application of digital technology in all aspects of human society. Digital transformation may be thought of as the third stage of embracing digital technologies from digital competence to digital usage to digital transformation with usage and transformative ability informing digital literacy. The transformation stage means that digital usages inherently enable new types of innovation and creativity in a particular domain rather than simply enhance and support the traditional methods. These industry thought leaders together with the leading edge case studies will help you understand the meaning and impact of Digital Transformation and how you can leverage that transformation likely using BPM you already have. Learn how to extend that into core processes that run the business and thus engage more meaningfully with your customers. The authors discuss the impact of emerging technologies, the mandate for greater transparency and how the ongoing aftershocks of globalization have collectively impacted predictability within the business enterprise.

Best Practices for Knowledge Workers Sandy Kemsley, Nathaniel Palmer, Jim Sinur, Keith D. Swenson, Dr. Setrag Khoshafian, Linus Chow, William A. Brantley, Kerry Finn, John T. Matthias, Kay Winkler, David Gomez, 2019-10-23 Best Practices for Knowledge Workers describes ACM in the current era of digitization. Internet of Things, IoT, artificial intelligence, AI, intelligent BPMS and BPM Everywhere. You will learn how support of adaptive data driven processes empowers knowledge workers to know in real time what is happening at the edge points and to take actions through the combination of rule driven guidance and their own know how. It is not a traditionally automated system but intelligent automation where technology doesn't merely replace human decision making but extends the reach of the knowledge worker making IoT data actionable. As Sandy Kemsley points out in her foreword, As adaptive case management ACM systems mature we are moving beyond simple systems that allow knowledge workers to define ad hoc processes to creating more intelligent systems that support and guide them. Knowledge workers still need to dynamically add information, define activities and collaborate with others in order to get their work done but those are now just the table stakes in a world of big data and intelligent agents. To drive innovation and maintain operational efficiencies we need to augment case work typically seen as relying primarily on human intelligence with machine intelligence. In other words we need intelligent ACM. Highly predictable work is easy to support using traditional programming techniques while unpredictable work cannot be accurately scripted in advance and thus requires the involvement of the knowledge workers themselves. The core element of
