Pattern Classification Richard O. Duda,Peter E. Hart,David G. Stork,2012-11-09 The first edition published in 1973 has become a classicreference in the field Now with the second edition readers willfind information on key new topics such as neural networks andstatistical pattern recognition the theory of machine learning and the theory of invariances Also included are worked examples comparisons between different methods extensive graphics expandedexercises and computer project topics An Instructor s Manual presenting detailed solutions to all theproblems in the book is available from the Wiley editorialdepartment **Bioinformatics and Computational Biology Solutions Using R and Bioconductor** Robert Gentleman,Vincent Carey,Wolfgang Huber,Rafael Irizarry,Sandrine Dudoit,2005-12-29 Bioconductor is a widely used open source and open development software project for the analysis and comprehension of data arising from high throughput experimentation in genomics and molecular biology Bioconductor is rooted in the open source statistical computing environment R This volume s coverage is broad and ranges across most of the key capabilities of the Bioconductor project including importation and preprocessing of high throughput data from microarray proteomic and flow cytometry platforms Curation and delivery of biological metadata for use in statistical modeling and interpretation Statistical analysis of high throughput data including machine learning and visualization Modeling and visualization of graphs and networks The developers of the software who are in many cases leading academic researchers jointly authored chapters All methods are illustrated with publicly available data and a major section of the book is devoted to exposition of fully worked case studies This book is more than a static collection of descriptive text figures and code examples that were run by the authors to produce the text it is a dynamic document Code underlying all of the computations that are shown is made available on a companion website and readers can reproduce every number figure and table on their own computers Biometric Solutions David D. Zhang,2012-12-06 Biometric Solutions for Authentication in an E World provides a collection of sixteen chapters containing tutorial articles and new material in a unified manner This includes the basic concepts theories and characteristic features of integrating formulating different facets of biometric solutions for authentication with recent developments and significant applications in an E world This book provides the reader with a basic concept of biometrics an in depth discussion exploring biometric technologies in various applications in an E world It also includes a detailed description of typical biometric based security systems and up to date coverage of how these issues are developed Experts from all over the world demonstrate the various ways this integration can be made to efficiently design methodologies algorithms architectures and implementations for biometric based applications in an E world New Solutions for an Old Challenge Ronny Merkel,2014 In criminal investigations latent fingerprints are often considered as reliable means of identifying suspects However the evidential value of a print is strongly dependent on the knowledge of its age the time which has passed since deposition Suspects might admit their previous presence at a crime scene but often claim to have been

there prior to or after the crime Especially in regard to public or highly frequented crime scenes prints might lose their evidential value in this case potentially leading to dropped charges Despite its high relevance the challenge of estimating a latent print s age could not be adequately addressed for 80 years In this thesis non invasive high resolution capturing devices are for the first time applied to the age estimation challenge replacing classical physical or chemical print development techniques They allow to capture a single print in regular time intervals and to systematically study its degradation behavior Introducing automated processing methods in the form of a digital pipeline including preprocessing feature extraction and age estimation techniques objective age estimates are presented for the first time in this field Maximum classification performances of different capturing devices between 76% and 86% are achieved for two class problems Furthermore a qualitative influence model on the aging speed of latent prints is designed forming a prerequisite for future studies
