the increase in Bayesian activity by the number of published research articles the number of books and the extensive number of applications of Bayesian articles in applied disciplines such as science and engineering One reason for the dramatic growth in Bayesian modeling is the availab ity of computational algorithms to compute the range of integrals that are necessary in a Bayesian posterior analysis Due to the speed of modern c puters it is now possible to use the Bayesian paradigm to tvery complex models that cannot be t by alternative frequentist methods To t Bayesian models one needs a statistical computing environment This environment should be such that one can write short scripts to de ne a Bayesian model use or write functions to summarize a posterior distribution use functions to simulate from the posterior distribution construct graphs to illustrate the posterior inference An environment that meets these requirements is the R system R provides a wide range of functions for data manipulation calculation and graphical d plays Moreover it includes a well developed simple programming language that users can extend by adding new functions Many such extensions of the language in the form of packages are easily downloadable from the Comp hensive R Archive Network Machine Learning in Modeling and Simulation Timon Rabczuk, Klaus-Jürgen Bathe, 2023-10-03 Machine CRAN learning ML approaches have been extensively and successfully employed in various areas like in economics medical predictions face recognition credit card fraud detection and spam filtering There is clearly also the potential that ML techniques developed in Engineering and the Sciences will drastically increase the possibilities of analysis and accelerate the design to analysis time With the use of ML techniques coupled to conventional methods like finite element and digital twin technologies new avenues of modeling and simulation can be opened but the potential of these ML techniques needs to still be fully harvested with the methods developed and enhanced The objective of this book is to provide an overview of ML in Engineering and the Sciences presenting fundamental theoretical ingredients with a focus on the next generation of computer modeling in Engineering and the Sciences in which the exciting aspects of machine learning are incorporated The book is of value
