Federal Communications Commission, 2013 Distributed Computing Maurice Herlihy, 2003-07-31 DISC the International Symposium on DIStributed Computing is an annual forum for research presentations on all facets of distributed computing DISC 2000 was held on 4-6 October 2000 in Toledo Spain This volume includes 23 contributed papers and the extended abstract of an invited lecture from last year's DISC It is expected that the regular papers will later be submitted in a more polished form to fully refereed scientific journals

The extended abstracts of this year's invited lectures by Jean Claude Bermond and Sam Toueg will appear in next year's proceedings. We received over 100 regular submissions, a record for DISC. These submissions were read and evaluated by the program committee with the help of external reviewers when needed. Overall, the quality of the submissions was excellent and we were unable to accept many deserving papers. This year's Best Student Paper award goes to Polynomial and Adaptive Long Lived 2k 1 Renaming by Hagit Attiya and Arie Fouren. Arie Fouren is the student author.

CoED, 1991. Encountering Technology George Gerstman, 2021-05-24. Technology has changed the world. Most of us love technology. It has evolved. It has become more complex. We now carry a combined computer, telephone, and camera in the form of a smartphone. It's hard to believe that a smartphone contains, in addition to other technology, billions of transistors. In this fascinating book, the author, George Gerstman, shares his story of technology that he has seen evolve over his lifetime. Encountering Technology takes you from the 1940s to the present, with photographs showing much of the technology that Gerstman used and enjoyed. The book includes scores of examples of the technology, such as digital computers that Gerstman programmed during the 1950s, which weighed tons and weren't nearly as powerful as the computer in an iPhone; radios that he listened to before television became popular; the advent of video games; the evolution of the Internet; film cameras that he used before digital cameras were invented; and so much more. Gerstman describes how he personally encountered the digital revolution. Encountering Technology directs you through the most popular technology of the past 80 years. The book is a must-read for everyone with any interest in television, telephones, radios, computers, cameras, the Internet, watches, video, or other technology. Using photographs and clear narrative, Gerstman describes engrossing aspects of the technical devices. His background in electrical engineering and patent law, as well as being a consumer, has given him insights that are certain to inform and excite the reader.

Advances in Computers Marvin Zelkowitz, 2011-09-21. The series covers new developments in computer technology. Most chapters present an overview of a current subfield within computers, with many citations and often include new developments in the field by the authors of the individual chapters. Topics include hardware, software, theoretical underpinnings of computing, and novel applications of computers. This current volume emphasizes architectural advances and includes five chapters on hardware development, games for mobile devices such as cell phones, and open source software development. The book series is a valuable addition to university courses that emphasize the topics under discussion in that particular volume, as well as belonging on the bookshelf of industrial practitioners who need to implement many of the

technologies that are described Current information on power requirements for new processors Development of games for devices with limited screen sizes e g cellular telephones Open source software development Multicore processors

Intelligent Autonomous Systems Y. Kakazu, M. Wada, T. Sato, 1998 This book contains scientific and engineering activities of the fifth international conference of Intelligent Autonomous Systems IAS 5 The exploration for automatic systems has much attention over the centuries and created attractive research activities The Intelligent and Autonomous systems are the current trend toward fully automatic systems that can adapt to changes in their environment The purpose of the fifth IAS conference is to provide an opportunity for the international community of researchers in the field of autonomous systems as well as architectures tools components techniques and new IAS design methodologies The emphasis will be on science and technology for autonomous systems working in a complex environment

Computer Architecture Gérard Blanchet, Bertrand Dupouy, 2013-01-24 This book lays out the concepts necessary to understand how a computer works For reasons of clarity the authors have deliberately chosen examples that apply to machines from all eras without having to water down the contents of the book This choice helps to show how techniques concepts and performances have evolved since the first computers The book is divided into five parts The first four which are of increasing difficulty are the core of the book Elements of a Basic Architecture Programming Model and Operation Memory Hierarchy Parallelism and Performance Enhancement The final part provides hints and solutions to the exercises in the book as well as appendices The reader may approach each part independently based on their prior knowledge and goals

Parallel Algorithms and Architectures for DSP Applications Magdy A. Bayoumi, 2012-12-06 Over the past few years the demand for high speed Digital Signal Processing DSP has increased dramatically New applications in real time image processing satellite communications radar signal processing pattern recognition and real time signal detection and estimation require major improvements at several levels algorithmic architectural and implementation These performance requirements can be achieved by employing parallel processing at all levels Very Large Scale Integration VLSI technology supports and provides a good avenue for parallelism Parallelism offers efficient solutions to several problems which can arise in VLSI DSP architectures such as 1 Intermediate data communication and routing several DSP algorithms such as FFT involve excessive data routing and reordering Parallelism is an efficient mechanism to minimize the silicon cost and speed up the processing time of the intermediate middle stages 2 Complex DSP applications the required computation is almost doubled Parallelism will allow two similar channels processing at the same time The communication between the two channels has to be minimized 3 Application specific systems this emerging approach should achieve real time performance in a cost effective way 4 Testability and fault tolerance reliability has become a required feature in most of DSP systems To achieve such property the involved time overhead is significant Parallelism may be the solution to maintain acceptable speed performance
