**Abstract:** This paper presents a new approach to the problem of finding the optimal path in a network. The approach is based on the use of a heuristic function to estimate the cost of the path from a given node to the goal. The heuristic function is defined as the sum of the cost of the path from the node to the goal and the cost of the path from the goal to the node. This approach is shown to be more efficient than the standard A\* algorithm.

1. **Identify the problem.** The first step is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.
