**Continuity and Change in Cultural Adaptation to Mountain Environments** Ludomir R Lozny,2013-03-12 Up until now mountain ecosystems have not been closely studied by social scientists as they do not offer a readily defined set of problems for human exploitation as do for instance tropical forests or arctic habitats But the archaeological evidence had shown that humans have been living in this type of habitat for thousands of years From this evidence we can also see that mountainous regions are often frontier zones of competing polities and form refuge areas for dissident communities as they often are inherently difficult to control by centralized authorities As a consequence they fuel or contribute disproportionately to political violence But we are now witnessing changes and increasing vulnerability of mountain ecosystems caused by human activities Human adaptability to mountain ecosystems This volume presents an international and interdisciplinary account of the exploitation of and human adaptation to mountainous regions over time The contributions discuss human cultural responses to key physical and cultural stressors associated with mountain ecosystems such as aridity quality of soils steep slopes low productivity as well as transient phenomena such as changing weather patterns deforestation and erosion and the possible effects of climate change This volume will be of interest to anthropologists ecologists and geologists as mountainous landscapes change fast and cultures disappear and they
