Mountain Geography Physical And Human Dimensions:

Mountain Geography Martin F. Price, 2013-08-24 Mountain Geography is a comprehensive resource that gives readers an in depth understanding of the geographical processes that occur in the world's mountains and the impact of these regions on culture and society. The volume begins with an introduction that defines mountains followed by a comprehensive treatment of their physical geography including origins, climatology, snow and ice, landforms and geomorphic processes, soils, vegetation and wildlife. The concluding chapters discuss the human geography of mountains and our attitudes toward them, populations in the mountain regions and their livelihoods and interactions within dynamic environments, the diversity of mountain agriculture and the challenges of sustainable mountain development. Book Jacket **MOUNTAIN GEOGRAPHY. MARTIN F. PRICE. ALTON C. BYERS, 2017** *Mountains: Physical, Human-Environmental, and Sociocultural Dynamics* Mark A. Fonstad, 2018-12-07 Mountains have captured the interests and passions of people for thousands of years. Today millions of people live within mountain regions and mountain regions are often areas of accelerated environmental change. This edited volume highlights new understanding of mountain environments and mountain peoples around the world. The understanding of mountain environments and peoples has been a focus of individual researchers for centuries; more recently, the interest in mountain regions among researchers has been growing rapidly. The articles contained within are from a wide spectrum of researchers from different parts of the world who address physical, political, theoretical, social, empirical, environmental, methodological and economic issues focused on the geography of mountains and their inhabitants. The articles in this special issue are organized into three themed sections with very loose boundaries between themes: 1 physical dynamics of mountain environments, 2 coupled human physical dynamics, and 3 sociocultural dynamics in mountain regions. This book was first published as a special issue of the Annals of the American Association of Geographers. *Mountains, Climate and Biodiversity* Carina Hoorn, Allison Perrigo, Alexandre Antonelli, 2018-04-30 Mountains, Climate and Biodiversity A comprehensive and up to date synthesis for students and researchers. Mountains are topographically complex formations that play a fundamental role in regional and continental scale climates. They are also cradles to all major river systems and home to unique and often highly biodiverse and threatened ecosystems. But how do all these processes tie together to form the patterns of diversity we see today? Written by leading researchers in the fields of geology, biology, climate and geography, this book explores the relationship between mountain building and climate change and how these processes shape biodiversity through time and space. In the first two sections you will learn about the processes, theory and methods connecting mountain building and biodiversity. In the third section you will read compelling examples from around the world exploring the links between mountains, climate and biodiversity. Throughout the 31 peer reviewed chapters, a non technical style and synthetic illustrations make this book accessible to a wide audience. A comprehensive glossary summarises the main concepts and terminology. Readership: Mountains, Climate and Biodiversity is intended for students and researchers in geosciences, biology

and geography It is specifically compiled for those who are interested in historical biogeography biodiversity and conservation

García-Ruiz, José Arnáez, Teodoro Lasanta, Estela Nadal-Romero, Juan Ignacio López-Moreno, 2024-04-26 This book studies mountains with a global perspective like a complex topographic and topoclimatic mosaic organized in altitudinal belts that are influenced by a huge variability in slopes soils lithology and insolation Furthermore the presence of lower temperatures higher precipitation and the seasonal presence of snow create conditions conducive to supporting various life forms and natural geomorphological and hydrological processes The integration of environmental and human aspects highlights the impacts of human activities and climate fluctuations on soil hydrology soil erosion water resources and landscape landforms evolution After presenting the way in which humans from Prehistory to Alexander von Humboldt discovered the mountains subsequent chapters try to underline the importance of mountains in generating water resources and hydropower for lowlands serving as biodiversity hotspots and contributing to cultural diversity The book delves into the role of human activities in transforming the natural landscapes and creating new cultural landscapes This exploration considers the significance of altitudinal belts in shaping the spatial and temporal organization of land uses which in turn have been determined by population growth and the development of regional and national markets Additionally the book illustrates the effect of global change on mountain evolution exploring their consequences on landscape characteristics and dynamics as well as on the planetary role of the mountains It concludes by offering a unique perspective on enhancing mountain conservation in order to preserve cultures land uses and landscapes

No Friends but the Mountains Judith Matloff, 2017-03-07 A veteran war correspondent journeys to remote mountain communities across the globe from Albania and Chechnya to Nepal and Colombia to investigate why so many conflicts occur at great heights. Mountainous regions are home to only ten percent of the world's population yet host a strikingly disproportionate share of the world's conflicts. Mountains provide a natural refuge for those who want to elude authority and their remoteness has allowed archaic practices to persist well into our globalized era. As Judith Matloff shows, the result is a combustible mix we in the lowlands cannot afford to ignore. Traveling to conflict zones across the world, she introduces us to Albanian teenagers involved in ancient blood feuds, Mexican peasants hunting down violent poppy growers and Jihadists who have resisted the Russian military for decades. At every stop, Matloff reminds us that the drugs, terrorism and instability cascading down the mountainside affect us all. A work of political travel writing in the vein of Ryszard Kapuscinski and Robert Kaplan, *No Friends but the Mountains* is an indelible portrait of the conflicts that have unexpectedly shaped our world.
