**Past Climate Variability through Europe and Africa** Richard W. Battarbee, Françoise Gasse, Catherine E.

Stickley, 2007-11-06 This book provides a major synthesis of evidence for past climate variability at the regional and continental scale across Europe and Africa. It focuses on two complementary time scales: the Holocene (approximately the last 11 500 years) and the last glacial interglacial cycle (approximately the last 130 000 years). An overview of the climate system of the past has never been attempted before on this scale and as such the volume represents a benchmark for future research. It is written by an expert group of climate change scientists and presents an insight into past climate variability that challenges climatologists who seek to explain climate dynamics of the past and provides climate modellers with a work of reference for data model comparison. The book is an advanced but very readable text essential for all students and scientists interested in global environmental change. *African Palaeoenvironments and Geomorphic Landscape Evolution* Jörgen

Runge, 2010-11-01 This 30th jubilee volume 2010 of *Palaeoecology of Africa* looks back and reflects the state of the art of what is actually known on former African climates and ecosystems in the format of review articles authored by specialists in the field. New research articles on climate and ecosystem dynamics as well as applied topics on geomorphic ha

Mediterranean Climate Variability P. Lionello, Paola Malanotte-Rizzoli, R. Boscolo, 2006-08-22 This multi-authored book provides an updated description of climate variability in the Mediterranean basin focusing on decadal and centennial time scales and on the results available on the impact of future emission scenarios at regional scale. The authors describe both local physical processes responsible for these variability such as changes in the surface properties and land use and global processes such as changes in the large scale atmospheric circulation associated to global warming, NAO, tropical monsoon and ENSO. Regional climate change issues are also addressed. *Mediterranean Climate Variability* aims to review the research on this region and to provide at the same time both an introduction and a reference for researchers. It covers topics typical of Climatology, Climate history, Meteorology, Oceanography, Environmental Science but the information here provided would also be useful for research in agriculture, social and economic studies. It is addressed to scientists and students interested in the Mediterranean climate and environment. Some topics have interesting connections to nearby regions: Northern Atlantic, West Africa, central and Eastern Europe. Each chapter will contain a summary meant to provide information to policy makers, researchers from other fields and in general to a wide audience without a technical expertise on climate. Provides an updated analysis of the Mediterranean climate features and guidelines for future research. Considers both oceanographic and atmospheric aspects. Analyzes the Mediterranean climate in a global perspective. Integrating Paleoclimate, Stratigraphy, Sedimentology & Paleontology in Human Evolution and Dispersal Studies - from Early Hominins to the Holocene Verena E. Foerster, Christian Zeeden, Annett Junginger, 2022-05-25 Geochemistry Research Advances Olafur Stefánsson, 2008 The field of geochemistry involves study of the chemical composition of the Earth and other planets.

chemical processes and reactions that govern the composition of rocks and soils and the cycles of matter and energy that transport the Earth's chemical components in time and space and their interaction with the hydrosphere and the atmosphere

Socio-Environmental Dynamics along the Historical Silk Road Liang Emlyn Yang, Hans-Rudolf Bork, Xiuqi Fang, Steffen Mischke, 2019-02-27 This open access book discusses socio environmental interactions in the middle to late Holocene covering specific areas along the ancient Silk Road regions Over twenty chapters provide insight into this topic from various disciplinary angles and perspectives ranging from archaeology paleoclimatology antiquity historical geography agriculture carving art and literacy The Silk Road is a modern concept for an ancient network of trade routes that for centuries facilitated and intensified processes of cultural interaction and goods exchange between West China Central Asia the Middle East and the Mediterranean Coherent patterns and synchronous events in history suggest possible links between social upheaval resource utilization and climate or environment forces along the Silk Road and in a broader area Post graduates in studying will benefit from this work as well as it will stimulate young researchers to further explore the role played by the environment in long term socio cultural changes

**Global Environments Through the Quaternary** David E. Anderson, Andrew Goudie, Adrian Parker, 2013-02-07 This book delves into the environmental changes that have taken place during the Quaternary the two to three million years during which humans have inhabited the Earth and conveys the relevance of the study of this period to current environmental and climatic concerns

**The Oxford Handbook of African Archaeology** Peter Mitchell, Paul Lane, 2013-07-04 This Handbook provides a comprehensive

synthesis of African archaeology covering the entirety of the continent's past from the beginnings of human evolution to the archaeological legacy of European colonialism. It includes a mixture of key methodological and theoretical issues and debates and situates the subject's contemporary practice. Earth Paleoenvironments: Records Preserved in Mid- and Low-Latitude Glaciers L. DeWayne Cecil, Jaromy R. Green, Lonnie G. Thompson, 2006-04-11. Glaciers provide an unparalleled tool for studying global environmental change. This book is the first of its kind concentrating on the paleoenvironmental record archived in mid and low latitude glaciers. By concentrating mainly on the last 500 years of these records we can now see that laws enacted to protect our environment in Europe and North America are providing positive results. Documenting global mid and low latitude paleoenvironmental records in glaciers this volume forms a timely and essential complement to the wealth of literature on polar and Greenland ice sheet records. This text is directed towards undergraduate and graduate university audiences and forms an ideal supplement in courses dealing with climate and global environmental change, glaciology and natural resources management. It is also suitable in helping teach application of innovative analytical and interpretive methods and would be an excellent example of the rapidly emerging discipline of Forensic Earth Science. Wetlands: Monitoring, Modelling and Management Tomasz Okruszko, Edward Maltby, Jan Szatylowicz, Dorota Mirosław-Swiątek, 2014-04-21. Wetlands are complex and dynamic ecological systems incorporating two important interlinked components: hydrology and vegetation. Modelling wetland components and processes reveals the nature of wetland systems and helps to predict the effects of environmental change. The main goal of much current research is the construction of a vigorous and spatially explicit model of wetland systems. Aquatic Biodiversity Koen Martens, 2012-12-06. In this age of increased fundamental and applied research on biodiversity, no single volume was as yet devoted to the various temporal and spatial aspects of aquatic biodiversity. The present book is published in honour of Professor Henri Dumont, Ghent, Belgium, at the occasion of his retirement as Editor in Chief of *Hydrobiologia*. The volume presents a selection of contributions on aquatic biodiversity written by colleagues from the editorial board, fellow editors of aquatic journals and former students and collaborators. Contributions deal with a wide spectrum of topics related to aquatic biodiversity and cover fields such as actual and palaeolimnology, taxonomy and fundamental and applied limnology. Even reconnaissance chapters on management and cultural impact of water bodies are included. The book combines state-of-the-art contributions in aquatic sciences. Environmental Variability and Climate Change Keith Douglas Alverson, 2001. **A Scientific Bibliography of the Drakensberg, Maloti and Adjacent Lowlands** Rodney Moffett, 2021-04-19. This bibliography includes scientific articles on the Drakensberg, Maloti and Adjacent Lowlands published between 1808 and 2019. Although focussing on material appearing in accredited journals, there is such a wealth of information in the form of unpublished yet traceable reports, documents, presentations and dissertations that these are also included. The bibliography has two parts: a complete list arranged alphabetically and the same references arranged in 33 different disciplines. These range from Palaeobotany with 17 entries to

Rock Art with 502 entries      **From the Earth's Core to Outer Space** Ilmari Haapala, 2012-03-26 *From the Earth's Core to Outer Space* focuses on four themes 1 Evolving Earth's crust 2 Changing Baltic Sea 3 Climate Change and 4 Planet Earth third stone from Sun The focus on these four topics provides both a state of the art review of earth science topics of particular importance to Scandinavia and the Baltic and also the global context in which a consideration of these topics must be made It finishes by discussing our use of space born technologies for understanding these topics and places the Earth within the context of our neighbouring planets and their satellites The first theme includes papers on the structure origin and evolution of the Earth's crust and in particular the ore deposits in Fennoscandia plate tectonic drift of Fennoscandia Baltica and postglacial isostatic rebound of the crust The second theme contains papers dealing with changes in the ice season of the Baltic Sea inflow and stagnation in deep basins biology of the Baltic Sea and carbon dioxide balance in sea water The third theme deals with origin and evolution of oxygen in atmosphere postglacial climate change effects of aerosols and greenhouse gases on climate interplay between anthropogenic and natural factors in the current climate change and Earth's water resources The fourth theme includes articles on Earth's space environment use of satellites in cartography and geodesy information obtained by space probes on Mars and other planets and their moons and possibilities to find life on them

transition to the late Antique era These papers confirm Crete's place as a fully realized participant in the Roman world over the course of many centuries but also position it as a newly discovered source of academic inquiry

*Isotopes in Palaeoenvironmental Research* Melanie J. Leng, 2006-01-27 This volume is intended to show how stable isotopes can be applied to understanding the palaeoenvironment There are chapters on the interpretation of isotopes in water tree rings bones and teeth lake sediments speleothems and marine sediments Crucial to the understanding of the environmental signal contained within the isotope composition of different materials is to gain more information about how rainfall isotope compositions are determined by climate Chapter 1 Darling et al describes O H and C stable isotope compositions in the modern day water and aqueous carbon cycles to provide a framework for the interpretation of these isotopes in the past The chapter on the water cycle divides naturally into a number of sections The starting point precipitation is especially important because it is the precursor to which most O and H isotope proxy studies are attempting to relate While much is understood about the isotope systematics of precipitation largely owing to the existence of the IAEA WMO Global Network for Isotopes in Precipitation GNIP important questions remain to be answered in relation to the isotope temperature gradients of past climatic conditions The chapter describes the three reservoirs of water sustaining all terrestrial proxies soil and vadose zone moisture groundwater and surface waters In each reservoir isotope effects intervene to modify to a greater or lesser extent the isotope signature of antecedent precipitation groundwaters are least affected and surface waters the most

Crossing Borders between the Domestic and the Wild Mark J. Boda, Dalit Rom-Shiloni, 2024-01-25 The present volume searches for different biblical perceptions of the wild paying particular attention to the significance of fluid boundaries between the domestic and the wild and to the options of crossing borders between them Drawing on space fauna and flora scholars investigate the ways biblical authors present the wild and the domestic and their interactions In its six chapters and two responses Hebrew Bible scholars an archaeobotanist an archaeologist a geographer and iconographers join forces to discuss the wild and its portrayals in biblical literature The discussions bring to light the entire spectrum of real imagined metaphorized and conceptualized forms of the wild that appear in biblical sources as also in the material culture and agriculture of ancient Israel and to some extent observe the great gap between biblical observations and modern studies of geography and of mapping that marks the distinctions between the wilderness and the sown The book is the first written product presented on two consecutive years 2019 2020 at the SBL Annual Meetings in the Section Nature Imagery and Conceptions of Nature in the Bible
