constant flow of innovation offers new opportunities to support learners in an environment of ever shifting demands. Educators work as they have always done making the most of the resources at hand and dealing with constraints to provide experiences which foster growth. This was John Dewey's ideal of education 80 years ago and it is still relevant today. This view sees education as a practice that achieves its goals through creative processes involving both craft and design. Craft is visible in the resources that educators produce and in their interactions with learners. Design though is tacit and educators are often unaware of their own design practices. The rapid pace of change is shifting the balance from craft to design requiring that educators design work become visible, shareable and malleable. The participatory patterns workshop is a method for doing this through engaging practitioners in collaborative reflection leading to the production of structured representations of design knowledge. The editors have led many such workshops and this book is a record of that endeavour and its outcomes in the form of practical design narratives, patterns and scenarios that can be used to address challenges in teaching and learning with technology.

Learner Interactions in Massive Private Online Courses Di Sun, Gang Cheng, 2022-08-11. By employing learning analytics methodology and big data in Learning Management Systems (LMSs) this volume conducts data driven research to identify and compare learner interaction patterns in Massive Private Online Courses (MPOCs). The uncertainties about the temporal and sequential patterns of online interaction and the lack of specific knowledge and methods to investigate details of LMSs dynamic interaction traces have affected the improvement of online learning effectiveness. While most research focuses on Massive Open Online Courses (MOOCs) little is investigating the learners interaction behaviors in MPOCs. This book attempts to fill in the gaps by including research in the past decades, big data in education, presenting micro level interaction traces, analytics based learner interaction in massive private open courses and a case study. Aiming to bring greater efficiency and deeper engagement to individual learners, instructors and administrators the title provides a reference to those who need to evaluate their learning and teaching strategies in online learning. It will be particularly useful to students and researchers in the field of Education. This research was funded by Liaoning Social Science Planning Fund Program in China grant number L21BSH002.
