Coal and Coalbed Gas Romeo M. Flores, Tim A. Moore, 2024-01-24 *Coal and Coalbed Gas* Future Directions and Opportunities Second Edition introduces the latest in coal geology research and the engineering of gas extraction Importantly the second edition examines how over the last 10 years research has both changed focus and where it is conducted This shift essentially depicts a tale of two worlds one half Western Europe North America moving away from coal and coalbed gas research and production towards cleaner energy resources and the other half Asia Pacific region Eastern Europe South America increasing both research and usage of coal These changes are marked by a precipitous fall in coalbed gas production in North America however at the same time there has been a significant rise in coal and coalbed gas production in Australia China and India The driver for higher production and its associated research is a quest for affordable energy and economic security that a large resource base brings to any country like Australia's first large scale coalbed gas to liquid natural gas projects supplying the demand for cleaner burning LNG to the Asian Pacific region Since the last edition of this book global climate change policies have more forcibly emphasized the impact of methane from coal mines and placed these emissions equal to or even more harmful than CO₂ emissions from fossil fuels in general Governmental policies have prioritized capture use and storage of CO₂ burning coal in new highly efficient low emission power plants and gas pre drainage of coal mines The Organization for Economic Cooperation and Development OECD countries and China are also introducing new research into alternative non fuel uses for coal such as carbon fibers nanocarbons graphene soil amendments and as an unconventional ore for critical elements New to this edition Each chapter is substantially changed from the 1st edition including expanded and new literature citations and reviews important new data and information new features and materials as well as re organized and re designed themes Importantly three new chapters cover global coal endowment and gas potential groundwater systems related to coalbed gas production and biogenic gas generation as well as the changing landscape of coal and coalbed gas influenced by global climate change and net zero carbon greenhouse gas emissions

FOREWORD When I reviewed the first

edition of this book my initial thought was Do we need another book on coal geology and then I read it and realised Yes we need this book and my students downloaded copies as soon as it was available So now we come to 2023 and a lot has happened in the past decade For a different reason we might ask if we still need this book or even coal geoscientists and engineers as the world aims for rapid decarbonisation of the energy sector and a reduction of coal as a feedstock for industrial resources like steel manufacture

Public Health Reports, 2008 *Petroleum Biodegradation and Oil Spill Bioremediation* Karuna K. Arjoon, James G. Speight, 2022-12-22 The prime focus of the book is to determine the mechanism extent and efficiency of biodegradation processes as it is necessary to know the composition of the original crude oil or crude oil product The technology of bioremediation and the concerns of whether or not bioremediation technologies can accelerate this natural process enough to be considered practical and if so whether they might find a niche as replacements for or adjuncts to other crude oil spill response technologies This book also introduces the reader to the science of the composition of crude oil and crude oil products is at the core of understanding the chemistry of biodegradation and bioremediation processes

ownership or copyright of genetic material and more Veterinary Medicine and Pharmaceuticals Samuel Oppong Bekoe, Reimmel Kwame Adosraku, Mani Saravanan, P K Ramkumar, 2020-03-11 Veterinary pharmaceuticals provide animals with the requisite complete animal health care. The availability of safe and good quality medicines in the right amounts is needed in achieving optimum animal health care. The economic benefits of animal food products cannot be underestimated. Veterinary pharmaceuticals are needed to meet the ever growing demand of animal protein for the human population. However, their routine and unguarded use plays significant roles in many public health issues such as antimicrobial resistance. The practices, knowledge and awareness needed on the use and application of veterinary pharmaceuticals amongst farmers, animal health professionals, microbiologists and policy makers remain key in ensuring a safe and healthy food chain for all. In the field of veterinary medicine, canine practice is a challenge to veterinarians. In recent years, newer diagnostic methods and therapeutic protocols have been published on a regular basis. Along with the existing knowledge of important canine diseases like ascites, duodenal disorders, pericardial effusions and canine mastitis, this book is supplemented with all the latest information. Discussion of duodenal disorders in dogs including IBD and SIBO is an important topic in day to day practice. Ascites and mastitis in dogs are also important topics and are discussed in this book. Each topic carries practical points for the diagnosis and management of important diseases of dogs. Hence, this book will be very useful for canine practitioners.

Immune maturation and modulation in childhood allergies Johanna Huoman, 2020-10-15 The prevalence of allergic diseases has in the past century increased among children in affluent societies. Underlying causes are incompletely disentangled but decreased diversity in environmental and microbial exposures could drive allergy development. Allergic individuals possess imbalanced immune responses skewed in favour of Th2 cells along with lesser Th1 and Treg responses. As allergy development early in life increases the risk of developing further allergic manifestations later, early prevention is key. Thus, interventions in pregnancy, early life and childhood may modulate immunity towards tolerance, although underpinnings of immune maturation and modulation in allergy prevention throughout childhood are not entirely understood. In this thesis, these questions are addressed in children with a high propensity of developing allergic disease or who already have manifested allergies. Chemokines are crucial for immune cell recruitment to the allergic reaction site and associate with allergy development in childhood. In Paper I, circulating levels of the allergy related chemokines CCL17, CCL18, CCL22, CXCL10 and CXCL11 were studied in the natural course of allergic disease. Elevated levels of the Th2/Treg regulated chemokine CCL18 in infancy and childhood associated with development of asthma and/or sensitisation. Moreover, this finding conferred higher odds of developing asthma and sensitisation from early school age until adolescence. Additionally, increased levels of the Th1 associated chemokines CXCL10 after birth and decreased levels of CXCL11 at birth preceded asthma development later in life. Hence, Paper I showed that circulating chemokine levels in different ways precede allergy development. Epigenetic modifications such as DNA methylation comprise a link between the genetic setup and

environmental exposures and regulate processes such as Th cell differentiation Perinatal treatment with Lactobacillus reuteri and 3 fatty acids prevent development of some IgE mediated manifestations However the drivers of the immunostimulating and pro resolving effects of these treatments are sparsely examined In Papers II and III epigenome wide DNA methylation patterns in CD4 cells upon pre and postnatal L reuteri supplementation alone or in combination with 3 fatty acids were studied In Paper II the greatest epigenome wide differential methylation was evident at birth mainly directed towards hypomethylation indicating transcriptional availability of affected genes Network analyses revealed several immune related pathways and a relationship of differentially methylated genes to allergy development Thus prenatal L reuteri treatment seemingly poises Th cells towards immune activation at birth possibly influencing immune maturation as well as allergy development in the child In Paper III epigenome wide DNA methylation patterns were surveyed at birth In this on going trial mothers are treated during the latter half of pregnancy with a combination of L reuteri and 3 fatty acids Four different treatment groups were studied and the largest differential methylation was seen in the double active treatment group In contrast to Paper II most CpGs and genes were hypermethylated indicating repressed gene transcription In line with Paper II network analyses showed that T cell and immune mediated pathways were affected by treatment and synergistic effects of the double treatment were indicated Taken together prenatal treatment with L reuteri and or 3 fatty acids altered the epigenome to different extents at birth mainly towards hypermethylation and often affected immune related pathways Immunomodulatory effects of sublingual immunotherapy in children and adolescents are scarcely investigated In Paper IV circulating and salivary immune mediators were investigated in timothy grass pollen allergic children treated with sublingual immunotherapy Actively treated children had elevated levels of timothy grass pollen specific IgA antibodies in saliva along with increased circulating levels of the Th1 associated chemokines CXCL10 and CXCL11 both after treatment ending and two years later Taken together sublingual immunotherapy modulates local and peripheral immune responses in children with timothy grass pollen induced allergy by augmenting Th1 responses lessening Th2 responses and inducing immunomodulatory responses suggesting induction of tolerance also partly in the long term Altogether the studies in this thesis have shown altered immune regulation in children developing allergies Moreover immunomodulatory effects of prenatal treatment with probiotics and 3 fatty acids and sublingual immunotherapy in children with grass pollen induced allergic disease were revealed DNA methylation patterns and immunologic mediators in blood and saliva could potentially serve as appropriate biomarkers for allergic disease Long term health benefits can be reached by intervening early in life and further knowledge about the mechanisms behind this could promote the prevention of allergic diseases and hence improve the quality of life for children and adolescents F rekommenderar att fler studier ska utföras för att undersöka om dessa behandlingar verkligen har en positiv effekt på barns hälsa och om de kan användas som förebyggande åtgärder mot allergiska sjukdomar och astma Detta skulle kunna bidra till att förbättra barns livskvalitet och hälsa

för immunförsvarets felaktiga reaktion mot egentligen ofarliga antigen som ses vid allergier Hos allergiska individer är immunförsvaret obalanserat med en relativ övervik av det så kallade Th2-svaret gentemot Th1 och de regulatoriska T cellerna Treg-svaret Allergiska sjukdomar utvecklas ofta tidigt i livet vilket ökar risken för att utveckla vidare allergier senare i livet Det är viktigt att motverka den allergiska marschens framfart tidigt genom förebyggande behandlingar Ett tillvägagångssätt är att påbörja behandling under graviditeten och tidiga barndomen hos barn med hög risk för att bli allergiska då grunden för immunsystemet läggs redan under fosterlivet För redan utvecklade allergier är det troligare att omforma dessa immunsvår med immunterapi som kan minska symptom av befintliga allergier samtidigt som det är möjligt att motverka utvecklingen av senare allergier Det är dock inte helt klarlagt hur immunutvecklingen under barndomen regleras eller hur dessa typer av behandlingar skulle kunna påverka allergiutveckling under den perioden I denna avhandling undersöks immunutveckling vid allergiutveckling hos barn och möjliga immunmodulerande förebyggande behandlingar hos barn med genetisk benägenhet att bli allergiska eller som redan utvecklat allergisk sjukdom För att celler ska rekryteras till platsen för en allergisk reaktion krävs bland annat så kallade kemokiner I det första arbetet undersöktes dessa lockelseämnen då tidigare studier visat att nivåerna av vissa kemokiner vid födseln förutspår utvecklingen av allergi hos barn De allergirelaterade kemokinerna CCL17 CCL18 CCL22 CXCL10 och CXCL11 analyserades i blodprover vid födseln 1 och 8 respektive hos barn från en populationsbaserad observationsstudie Förhållande till nivåerna av CCL18 ett kemokin under reglering av både Th2 och Treg-svar uppmättes vid 1 och 8 respektive hos barn som hade astma såväl som astma och eller var sensibiliserade De nivåerna associerade också till högre odds för utveckling av astma från tidig skolålder upp till vuxen ålder med liknande resultat för sensibilisering vid de Th1 associerade kemokinerna CXCL10 efter födseln och minskade nivåerna av CXCL11 vid födseln förhindrade utvecklingen av astma senare i livet Det första arbetet visade alltså på att cirkulerande kemokiner på olika vis förreglerar utvecklingen av allergier hos barn och ungdomar Som länk mellan arv och miljö såväl som epigenetiska modifieringar vilka reglerar genaktiviteten utan att förändra den genetiska koden i arvsmassan Till dessa modifieringar räknas DNAmetylering en process som bland annat styr utvecklingen av de allergirelaterade Th2-parcellerna Vi har i tidigare separata studier med den probiotiska stammen *Lactobacillus reuteri* och omega 3-behandling visat förebyggande av vissa IgE-medierade allergier Vad som föranleder de immunstimulerande och immunmodulerande effekterna av behandlingarna är dock fortfarande oklart I det andra och tredje arbetet undersöktes hur *L. reuteri* separat eller i kombination med omega 3-fettsyror påverkar DNAmetyleringsnivåer i CD4 Th celler hos barn som behandlats före och efter födseln I det andra arbetet undersöktes DNAmetyleringsnivåer både lokalt och i hela genomet vid födseln ett och två respektive Behandling med *L. reuteri* förhöjde DNAmetyleringsnivåer i allergirelaterade Th2-parceller mest vid födseln mot så kallad hypometylering vilket pekar på samband till nylighet av generna för proteinuttryck Vidare tvärsnittsanalyser visade att flera immunrelaterade processer påverkades av behandlingen Därtill var generna från den tvärsnittet till stor del associerade med allergiutveckling Maternell behandling med *L. reuteri* under den sista graviditetsmånaden tycks alltså förändra

DNA metyleringsmönster i Th1-parceller hos fostret mot kad immunaktivering vid födseln vilket i sin tur skulle kunna påverka både immunutveckling och allergiutveckling hos barnet. I likhet med det andra arbetet undersöktes i det tredje arbetet DNA metyleringsmönster i hela epigenomet fast endast vid födseln. I denna pågående studie behandlas mödrarna under den andra halvan av graviditeten med en kombination av L reuteri och omega 3 fettsyror. Fyra olika behandlingsgrupper undersöktes och den största förändringen i DNA metylering terfanns i den kombinerade aktiva behandlingsgruppen. I motsats till det andra arbetet var dock de flesta CpG positionerna och generna hypermetylerade vilket tyder på att genernas tillgänglighet för proteinuttryck hålls i linje med det andra arbetet framkom T cells och immunrelaterade signalvägar i tvärsanalyser på dessa gener och det fanns indikationer på synergistiska effekter mellan behandlingarna. Det tredje arbetet visade att behandling med L reuteri och eller omega 3 fettsyror under senare delen av graviditeten förändrar Th1-parcellernas epigenom i olika grad först mot hypermetylering och ofta påverkar immunrelaterade signalvägar. Relevansen av dessa fynd kommer i framtida studier att undersökas på proteinnivå och i relation till allergiutveckling. Med allergenspecifik immunterapi är det möjligt att modulera immunsvaret hos allergiska individer mot ett tolerant immunsvaret men effekter av sublingual immunterapi på immunförsvaret hos barn och ungdomar är knapphändigt undersökta. I det fjärde arbetet undersöktes olika immunologiska mediatorer i blod och saliv hos barn med gräspollenallergi som deltagit i en studie med sublingual immunterapi. Nivåerna av allergirelaterade cytokiner och kemokiner undersöktes i blodprover från inklusionstillfället efter tre år med behandling samt två år efter avslutad behandling i plasmaprover och allergenstimulerade blodceller. Dessutom mättes total IgA sekretoriskt IgA och gräspollensspecifikt IgA i saliv vid samma tillfällen. Barn som fått aktiv behandling hade högre nivåer av gräspollensspecifika IgA antikroppar i saliv både under behandlingen avslutades och två år efter. Dessutom mättes nivåerna av de Th1 associerade kemokinerna CXCL10 och CXCL11 i blodet vid samma tidpunkter. Sammantaget visade resultaten från det fjärde arbetet att behandlingen med sublingual immunterapi hos barn med gräspollenallergi modulerar immunsvaret både lokalt och i cirkulationen genom att öka Th1 svar minska Th2 svar och inducera immunreglerande svar vilket indikerar att tolerans har utvecklats hos dessa barn delvis även på lång sikt. Sammanfattningsvis har studierna i denna avhandling visat på förändrad immunreglering hos barn som utvecklar allergi. Dessutom påvisades immunmodulerande effekter av prenatal behandling med probiotika och omega 3 fettsyror samt av sublingual immunterapi hos barn med gräspollenallergi. DNA metyleringsmönster och immunologiska mediatorer i blod och saliv skulle kunna fungera som möjliga biomarkörer för allergisk sjukdom vilket är ett viktigt led i att kunna förutsäga allergiutveckling och förbättra den kliniska behandlingen av allergier bland barn och ungdomar. Längsiktiga hälsoeffekter kan uppnås genom att ingripa tidigt i livet och vidare kunskap om mekanismerna bakom detta skulle kunna förminska påverkan av allergiska sjukdomar och således kunna förbättra livskvaliteten för barn och ungdomar.

Antimicrobial Drugs David Greenwood, 2008-02-21 Between 1935 and 1944 the field of microbiology and by implication medicine as a whole underwent dramatic advancement The discovery of the extraordinary antibacterial properties of sulphonamides penicillin and streptomycin triggered a frantic hunt for more antimicrobial drugs that was to yield an abundant harvest in a very short space of time By the early 1960s more than 50 antibacterial agents were available to the prescribing physician and largely by a process of chemical modification of existing compounds that number has more than tripled today We have become so used to the ready availability of these relatively safe and highly effective miracle drugs that it is now hard to grasp how they transformed the treatment of infection This book documents the progress made from the first tentative search for an elusive chemotherapy of infection in the early days of the twentieth century to the development of effective antiviral agents for the management of HIV as the millennium drew to a close It also offers a celebration of the individuals and groups that made this miracle happen as well as examining the inexorable rise of the global pharmaceutical industry and most intriguingly the essential input of luck Infection still maintains a high profile in both medicine and the media with the current threats of superbugs such as MRSA acquired in hospital and a potential resistance to antibiotics This book tracks the history of antimicrobial drugs a remarkable medical triumph that has provided doctors with an amazing armoury of safe and effective drugs that ensure that reversion to the helpless state of the

fight against infection witnessed in the early 1900s is extremely unlikely This timely compendium acknowledges the agents that have surely led to the relief of more human and animal suffering than any other class of drugs in the history of medical endeavour
