Pedagogy and the Practice of Science David Kaiser, 2005 Studies examining the ways in which the training of engineers and scientists shapes their research strategies and scientific identities **How Science Works** Rob Toplis, 2010-12-02 How Science Works provides student and practising teachers with a comprehensive introduction to one of the most dramatic changes to the secondary science curriculum Underpinned by the latest research in the field it explores the emergence and meaning of How Science Works and reviews major developments in pedagogy and practice With chapters structured around three key themes why How Science Works what it is and how to teach it expert contributors explore issues including the need for curriculum change arguments for scientific literacy for all school students views about science what we understand about scientific methods types of scientific enquiry and importantly effective pedagogies and their implications for practice Aiming to promote discussion and reflection on the ways forward for this new and emerging area of the school science curriculum it considers teaching controversial issues in science argumentation and questioning for effective teaching enhancing investigative science and developing reasoned scientific judgments the role of ICT in exploring How Science Works teaching science outside the classroom How Science Works is a source of guidance for all student new and experienced teachers of secondary science interested in investigating how the curriculum can provide creativity and engagement for all school students The Pedagogical Seminary ,1917 Vols 5 15 include Bibliography of child study by Louis N Wilson **The Pedagogy of Physical Science** David Heywood, Joan Parker, 2009-12-16 In the science classroom there are some ideas that are as difficult for young students to grasp as they are for teachers to explain Forces electricity light and basic astronomy are all examples of conceptual domains that come into this category How should a teacher teach them The authors of this monograph reject the traditional separation of subject and pedagogic knowledge They believe that to develop effective teaching for meaningful learning in science we must identify how teachers themselves interpret difficult ideas in science and in particular what supports their own learning in coming to a professional understanding of how to teach science concepts to young children To do so they analyzed trainee and practising teachers responses to engaging with difficult ideas when learning science in higher education settings The text demonstrates how professional insight emerges as teachers identify the elements that supported their understanding during their own learning In this paradigm professional awareness derives from the practitioner interrogating their own learning and identifying implications for their teaching of science The book draws on a significant body of critically analysed empirical evidence collated and documented over a five year period involving large numbers of trainee and practising teachers It concludes that it is essential to problematize subject knowledge both for learner and teacher The book's theoretical perspective draws on the field of cognitive psychology in learning In particular the role of metacognition and cognitive conflict in learning are examined and subsequently applied in a range of contexts The work offers a unique and refreshing approach in addressing the important professional dimension

of supporting teacher understanding of pedagogy and critically examines assumptions in contemporary debates about constructivism in science education

Springer Handbook of Model-Based Science Lorenzo Magnani, Tommaso Bertolotti, 2017-05-22 This handbook offers the first comprehensive reference guide to the interdisciplinary field of model based reasoning. It highlights the role of models as mediators between theory and experimentation and as educational devices as well as their relevance in testing hypotheses and explanatory functions. The Springer Handbook merges philosophical, cognitive and epistemological perspectives on models with the more practical needs related to the application of this tool across various disciplines and practices. The result is a unique, reliable source of information that guides readers toward an understanding of different aspects of model based science such as the theoretical and cognitive nature of models as well as their practical and logical aspects. The inferential role of models in hypothetical reasoning, abduction and creativity once they are constructed, adopted and manipulated for different scientific and technological purposes is also discussed. Written by a group of internationally renowned experts in philosophy, the history of science, general epistemology, mathematics, cognitive and computer science, physics and life sciences as well as engineering, architecture and economics, this Handbook uses numerous diagrams, schemes and other visual representations to promote a better understanding of the concepts. This also makes it highly accessible to an audience of scholars and students with different scientific backgrounds. All in all, the Springer Handbook of Model Based Science represents the definitive, application oriented reference guide to the interdisciplinary field of model based reasoning.

The Oxford Handbook of the History of Physics Jed Z. Buchwald, Robert Fox, 2013-10 This Oxford Handbook brings together contributions by leading authorities on key areas of the history of physics since the seventeenth century. In a single volume, it offers a comprehensive introduction to scholarly contributions that have tended to be dispersed in journals and books not easily accessible to the student or general reader.

Communicating Physics Josep Simon, 2015-07-22 The textbooks written by Adolphe Ganot (1804-87) played a major role in shaping the way physics was taught in the nineteenth century. Ganot's books were translated from their original French into more than ten languages, including English, allowing their adoption as standard works in Britain and spreading their influence as far as North America, Australia, India and Japan. Simon's Franco-British case study looks at the role of Ganot's two textbooks: *Traité élémentaire de physique expérimentale et appliquée* (1851) and *Cours de physique purement expérimentale* (1859) and their translations into English by Edmund Atkinson. The study is novel for its international comparison of nineteenth century physics, its acknowledgement of the role of book production on the impact of the titles and for its emphasis on the role of communication in the making of science.

Ownership of Knowledge

Dagmar Schafer,Annapurna Mamidipudi,Marius Buning,2023-07-18 A framework for knowledge ownership that challenges the mechanisms of inequality in modern society Scholars of science technology medicine and law have all tended to emphasize knowledge as the sum of human understanding and its ownership as possession by law Breaking with traditional discourse on knowledge property as something that concerns mainly words and intellectual history or science and law Dagmar Sch fer Annapurna Mamidipudi and Marius Buning propose technology as a central heuristic for studying the many implications of knowledge ownership Toward this end they focus on the notions of knowledge and ownership in courtrooms workshops policy and research practices while also shedding light on scholarship itself as a powerful tool for making explicit the politics inherent in knowledge practices and social order The book presents case studies showing how diverse knowledge economies are created and how inequalities arise from them Unlike scholars who have fragmented this discourse across the disciplines of anthropology sociology and history the editors highlight recent developments in the emerging field of the global history of knowledge as science as economy and as culture The case studies reveal how notions of knowing and owning emerge because they reciprocally produce and determine each other s limits and possibilities that is how we know inevitably affects how we can own what we know and how we own always impacts how and what we are able to know Contributors Dagmar Sch fer Annapurna Mamidipudi Cynthia Brokaw Marius Buning Viren Murthy Marjolijn Bol Amy E Slaton James Leach Myles W Jackson Lissant Bolton Vivek S Oak J rn Oeder
