Adherence to Pediatric Medical Regimens Michael A. Rapoff, 2007-11-23 1 It is incumbent on medical providers that they are asking patients to adhere to regimens with demonstrated efficacy Providers need to remind themselves of the Hippocratic oath I will follow that system of regimen which according to my ability and judgment I consider for the benefit of my patients and abstain from whatever is deleterious and mischievous as cited in Cassell 1991 p 145 2 Providers need to abandon the blame and shame approach to dealing with medical adherence problems It is tempting to blame patients for adherence failures and shame them into changing their behavior Providers need to share the blame or better yet omit blame and look at their own attitudes and behaviors that impact adherence For example failing to simplify regimens or minimize negative side effects can adversely impact patient adherence 3 Patients and their families are no longer or maybe were never satisfied with a passive role in their health care In fact the term compliance lost favor in the literature because it implied for some an authoritarian approach to health care that required unquestioned obedience by patients to provider recommendations DiMatteo the physician is part of the treatment
