Pediatric Neurology Charles R. Newton, Pierre-Marie Preux, Prathiba Singhi, 2013-04-23. Parasites infect the central nervous system of children particularly in resource poor areas and tropical countries. However, these infections are increasingly seen in the West with the increase in children travelling to these areas and immigrant populations. These conditions are important in the differential diagnosis of common neurological syndromes. Falciparum malaria is a common cause of seizures and coma in endemic areas. Neurocysticercosis is a common cause of acquired epilepsy in some areas. Schistosomiasis is an important cause of spinal cord disease. Toxocara is ubiquitous and may cause encephalitis and retinal changes and may be associated with epilepsy. Other parasitic conditions tend to be localized to specific regions of the world. Parasitic diseases are often associated with eosinophilia and some cause an eosinophilic meningoencephalitis although there are many nonparasitic causes of this syndrome. Most parasitic conditions can be treated but in some diseases it is unclear whether the treatment influences outcome.

Pediatric Neurology, Part I Olivier Dulac, Maryse Lassonde, Harvey B. Sarnat, 2013-04-24. The child is neither an adult miniature nor an immature human being. At each age it expresses specific abilities that optimize adaptation to its environment and development of new acquisitions.

Diseases in children cover all specialties encountered in adulthood and neurology involves a particularly large area ranging from the brain to the striated muscle the generation and functioning of which require half the genes of the whole genome and a majority of mitochondrial ones Human being nervous system is sensitive to prenatal aggression is particularly immature at birth and development may be affected by a whole range of age dependent disorders distinct from those that occur in adults Even diseases more often encountered in adulthood than childhood may have specific expression in the developing nervous system The course of chronic neurological diseases beginning before adolescence remains distinct from that of adult pathology not only from the cognitive but also motor perspective right into adulthood and a whole area is developing for adult neurologists to care for these children with persisting neurological diseases when they become adults Just as pediatric neurology evolved as an identified specialty as the volume and complexity of data became too much for the general pediatrician or the adult neurologist to master the discipline has now continued to evolve into so many subspecialties such as epilepsy neuromuscular disease stroke malformations neonatal neurology metabolic diseases etc that the general pediatric neurologist no longer can reasonably possess in depth expertise in all areas particularly in dealing with complex cases Subspecialty expertise thus is provided to some trainees through fellowship programmes following a general pediatric neurology residency and many of these fellowships include training in research Since the infectious context the genetic background and medical practice vary throughout the world this diversity needs to be represented in a pediatric neurology textbook Taken together and although brain malformations H Sarnat P Curatolo 2007 and oncology W Grisold R Soffietti are covered in detail in other volumes of the same series and therefore only briefly addressed here these considerations justify the number of volumes and the number of authors who contributed from all over the world Experts in the different subspecialties also contributed to design the general framework and contents of the book Special emphasis is given to the developmental aspect and normal development is reminded whenever needed brain muscle and the immune system The course of chronic diseases into adulthood and ethical issues specific to the developing nervous system are also addressed A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care [Swaiman's Pediatric Neurology - E-Book](#) Stephen Ashwal, Phillip L.
