Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education Educational Outcomes for the Canadian Workplace Jane

Assessment P. J. Gaskell, British Columbia. Ministry of Education and Ministry Responsible for Multiculturalism and Human Rights. Research and Evaluation Branch, 1993 The focus of this study is on the participation rates of girls in senior level mathematics and physical science courses rather than on achievement It also emphasizes differences between boys and girls and how gender shapes a decision about whether or not to enrol in a subject area such as algebra or physics It looks at the girls and boys own constructions of their reasons for enrolling or not enrolling in the courses Finally it focuses on secondary schools *Routledge Library Editions: Curriculum* Various, 2021-07-09 Reissuing works originally published between 1971

and 1994 this collection includes books which offer a broad spectrum of views on curriculum both within individual schools and the wider issues around curriculum development reform and implementation Some cover the debate surrounding the establishment of the national curriculum in the UK while others are a more international in scope Many of these books go beyond theory to discuss practical issues of real curriculum changes at primary or secondary level The Set includes books on cross curricular topics such as citizenship and environment and also guidance careers life skills and pastoral care in schools A fantastic collection of education history with much still relevant today **Improving Large-Scale Assessment in**

Education Marielle Simon, Kadriye Ercikan, Michel Rousseau, 2012-08-21 Large scale assessments LSAs play a growing role in education policy decisions accountability and education planning worldwide This book focuses on central issues that are key components of successful planning development and implementation of LSAs The book's main distinction is its focus on

practice based cutting edge research This is achieved by having chapters co authored by world class researchers in collaboration with measurement practitioners The result is a how to book whose language is accessible to practitioners and graduate students as well as academics No other book so thoroughly covers current issues in the field of large scale assessment An introductory chapter is followed by sixteen chapters that each focus on a specific issue The content is prescriptive and didactic in nature but based on the most recent scientific research It includes successful experiences exemplary practices training modules interesting breakthroughs or alternatives and promising innovations regarding large scale assessments Finally it covers meaningful topics that are currently taking center stage such as motivating students background questionnaires comparability of different linguistic versions of assessments and cognitive modeling of learning and assessment

This book takes stock of where we are in science education research and considers where we ought now to be going It explores how and whether the research effort in science education has contributed to improvements in the practice of teaching science and the science curriculum It contains contributions from an international group of science educators Each chapter explores a specific area of research in science education considering why this research is worth doing and its potential for development Together they look candidly at important general issues such as the impact of research on classroom practice and the development of science education as a progressive field of research The book was produced in celebration of the work of the late Rosalind Driver All the principal contributors to the book had professional links with her and the three sections of the book focus on issues that were of central importance in her work research on teaching and learning in science the role of science within the school curriculum and the nature of the science education we ought to be providing for young people and the achievements of and future agenda for research in science education Knowing Your Schools Jim Dueck,2022-01-09 Education is a significant social program in our culture because we understand that learning well impacts our capacity to live well Its importance produces many controversies because perspectives are greatly influenced by what policies and practices are implemented Inevitably the general public has insufficient time and or interest to scratch away the veneer surrounding controversial matters and discover what should be This book identifies numerous conflicts within the field of education and provides the perspectives and information which stakeholders within the enterprise sweep aside or cover up An extensive data base is used to demonstrate why existing policies and practices create unfair learning situations for our nation s children frequently described as our most valuable resource Policy makers both administrative and legislative are caught in the middle yet they choose to avoid controversy by siding with educators This book provides evidence of how the decision making should be altered to achieve optimal learning in our North American
