Culture and National Security in the Americas Brian Fonseca,, Eduardo A. Gamarra, 2017-01-31 With contributions from leading experts Culture and National Security in the Americas examines the most influential historical geographic cultural political economic and military considerations shaping national security policies throughout the Americas In this volume contributors explore the actors and institutions responsible for perpetuating security cultures over time and the changes and continuities in contemporary national security policies

**Extinction in Our Times** James P. Collins, Martha L. Crump, Thomas E. Lovejoy III, 2009-07-07 For over 350 million years thousands of species of amphibians have lived on earth but since the 1990s they have been disappearing at an alarming rate in many cases quite suddenly and mysteriously What is causing these extinctions What role do human actions play in them What do they tell us about the overall state of biodiversity on the planet In Extinction in Our Times James Collins and Martha Crump explore these pressing questions and many others as they document the first modern extinction event across an entire vertebrate class using global examples that range from the Sierra Nevada of California to the rainforests of Costa Rica and the Mediterranean coast of North Africa Joining scientific rigor and vivid storytelling this book is the first to use amphibian decline as a lens through which to see more clearly the larger story of climate change conservation of biodiversity and a host of profoundly important ecological evolutionary ethical philosophical and sociological issues

**Amphibian Alliance for Zero Extinction sites in Chiapas and Oaxaca** Rodolfo Cabrera Hernandez, John F. Lamoreux, Meghan W. McKnight, 2015-03-01 The potential for numerous amphibian species to go extinct in Oaxaca and Chiapas is high and worthy of being considered a major environmental problem This report summarizes the findings of a project aimed at gathering information at 16 sites in southern Mexico which had been identified in 2005 as being essential to the continued existence of 22 highly threatened amphibian species the hope being that it could help initiate conservation action Site and species information are presented as a series of profiles

**Balkan Biodiversity** Huw I. Griffiths, Boris Kryštufek, Jane M. Reed, 2013-03-19 Balkan Biodiversity is the first attempt to synthesise our current understanding of biodiversity in the great European hot spot The conservation of biodiversity is one of today s great ecological challenges but Balkan biodiversity is still poorly understood in a region with complex physical geography and a long history of political conflict The Balkans exhibit outstanding levels of endemism particularly in caves and ancient lakes such as Ohrid lying at the crossroads of Europe and Asia they are also renowned as a focus of Pleistocene glacial refugia This volume unites a diverse group of international researchers for the first time Its interdisciplinary approach gives a broad perspective on biodiversity at the level of the gene species and ecosystem including contributions on temporal change Biological groups include plants mammals spiders and humans cave dwelling organisms fish aquatic invertebrates and algae

The book should be read by zoologists botanists speleobiologists palaeoecologists palaeolimnologists and environmental scientists

*Social and Ecological System Dynamics* Krystyna Stave, Goraw Goshu, Shimelis Aynalem, 2017-04-06 This book is a social ecological system description and feedback analysis of the Lake Tana Basin the headwater catchment of the Upper Blue Nile River This basin is an important local national and international resource and concern about its sustainable development is growing at many levels Lake Tana Basin outflows of water sediments nutrients and contaminants affect water that flows downstream in the Blue Nile across international boundaries into the Nile River the lake and surrounding land have recently been proposed as a UNESCO Biosphere Reserve the basin has been designated as a key national economic growth corridor in the Ethiopian Growth and Transformation Plan In spite of the Lake Tana Basin s importance there is no comprehensive integrated system wide description of its characteristics and dynamics that can serve as a basis for its sustainable development This book presents both the social and ecological characteristics of the region and an integrated system wide perspective of the feedback links that shape social and ecological change in the basin Finally it summarizes key research needs for sustainable development

Vietnam: A Natural History Eleanor Jane Sterling, Martha Maud Hurley, Le Duc Minh, 2008-10-01 A country uncommonly rich in plants animals and natural habitats the Socialist Republic of Vietnam shelters a significant portion of the world s biological diversity including rare and unique organisms and an unusual mixture of tropical and temperate species This book is the first comprehensive account of Vietnam s natural history in English Illustrated with maps photographs and thirty five original watercolor illustrations the book offers a complete tour of the country s plants and animals along with a full discussion of the factors shaping their evolution and distribution Separate chapters focus on northern central and southern Vietnam regions that encompass tropics subtropics mountains lowlands wetland and river regions delta and coastal areas and offshore islands The authors provide detailed descriptions of key natural areas to visit where a traveler might explore limestone caves or glimpse some of the country s twenty seven monkey and ape species and more than 850 bird species The book also explores the long history of humans in the country including the impact of the Vietnam American War on plants and animals and describes current efforts to conserve Vietnam s complex fragile and widely threatened biodiversity

Marine, Freshwater, and Wetlands Biodiversity Conservation David L. Hawksworth, Alan T. Bull, 2007-11-25 Marine coastal and wetland habitats are threatened through exploitation and also by climate change as ocean currents change course sea levels rise and rainfall patterns change This book gathers papers on the biodiversity conservation of these increasingly threatened habitats The papers provide a snapshot of the problems they face and offer numerous examples which render this volume valuable to educators in marine freshwater and wetlands ecology conservation and ecological restoration

**The Conservation and Biogeography of Amphibians in the Caribbean** Neftalí Ríos-López, Harold Heatwole, 2023-02-28 An expansive and detailed review of the biology of Caribbean amphibians considering their threats conservation and outlook in a changing world Amphibians are the group of vertebrates undergoing

the fastest rate of extinction it is urgent that we understand the causes of this and find means of protecting them This landmark illustrated volume brings together the leading experts in the field As well as offering an overview of the region as a whole individual chapters are devoted to each island or island group and the measures used to protect their amphibians through legislation or nature reserves The biological background of insular biogeography including its methods analysis and results is reviewed and applied specifically to the problems of Caribbean amphibians this includes a re examination of patterns and general ideas about the status of amphibians in the Anthropocene The Conservation and Biogeography of Amphibians in the Caribbean offers an important baseline against which future amphibian conservation can be measured in the face of climate change rising sea level and a burgeoning human population Covers over 300 species **Human**

**Future of Amazonian Aquatic Biota** Samara Silva de Souza,Susana Braz-Mota,Adalberto Luis Val,2024-12-29 The aquatic habitats of the Amazon region are subject to natural daily and seasonal variations in the physico chemical properties of the water The organisms that inhabit these habitats have developed adaptations to cope with these natural events However human induced environmental changes are threatening ecosystems and affecting biodiversity at all levels of biological organization by causing drastic changes in climatic conditions in a shorter period of time without giving organisms time to adapt In this sense the book addresses the future of aquatic organisms in the Amazon including bacterial symbionts insects crustaceans fish plants and amphibians and provides an overview of what the future of biodiversity in the Amazon will look like both in terms of organisms adaptations to natural changes and in terms of vulnerability and responses to human impacts highlighting possible mechanisms to minimize the expected impacts The book also provides a brief overview of the risks that climate change poses to livestock strategies for the sustainable use of species in the Amazon region and the impact of climate change on fish diseases **Alternative Futures for Global Food and Agriculture** OECD,2016-02-18 This report develops

three contrasting scenarios to illustrate alternative futures based on several global economic models and extensive stakeholder discussions and outlines policy considerations to help ensure that future needs are met sustainably

**Amazonia: Landscape and Species Evolution** Carina Hoorn,Frank Wesselingh,2011-09-26 The book focuses on geological history as the critical factor in determining the present biodiversity and landscapes of Amazonia The different driving mechanisms for landscape evolution are explored by reviewing the history of the Amazonian Craton the associated sedimentary basins and the role of mountain uplift and climate change This book provides an insight into the Meso and Cenozoic record of Amazonia that was characterized by fluvial and long lived lake systems and a highly diverse flora and fauna This fauna includes giants such as the ca 12 m long caiman Purussaurus but also a varied fish fauna and fragile molluscs whilst fossil pollen and spores form relics of ancestral swamps and rainforests Finally a review the molecular

datasets of the modern Amazonian rainforest and aquatic ecosystem discussing the possible relations between the origin of Amazonian species diversity and the palaeogeographic palaeoclimatic and palaeoenvironmental evolution of northern South America The multidisciplinary approach in evaluating the history of Amazonia has resulted in a comprehensive volume that provides novel insights into the evolution of this region      Conservation of Caribbean Island Herpetofaunas Volume 1: Conservation Biology and the Wider Caribbean Adrian Hailey, Byron Wilson, Julia Horrocks, 2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume introduces the issues particularly affecting Caribbean herpetofaunas and gives an overview of evolutionary and taxonomic patterns influencing their conservation

**World Atlas of Biodiversity** Brian Groombridge, Martin Jenkins, 2002 Global biological diversity ecosystem diversity

**Assembling the Tree of Life** Joel Cracraft, Michael J. Donoghue, 2004-07-22 This edited volume provides an authoritative synthesis of knowledge about the history of life All the major groups of organisms are treated by the leading workers in their fields With sections on The Importance of Knowing the Tree of Life The Origin and Radiation of Life on Earth The Relationships of Green Plants The Relationships of Fungi and The Relationships of Animals This book should prove indispensable for evolutionary biologists taxonomists ecologists interested in biodiversity and as a baseline sourcebook for organismic biologists botanists and microbiologists An essential reference in this fundamental area      **Sexual Selection** Regina H. Macedo, Glauco Machado, 2013-09-25 Sexual Selection Perspectives and Models from the Neotropics presents new sexual selection research based upon neotropical species As neotropical regions are destroyed at an alarming rate with an estimated 140 species of rainforest plants and animals going extinct every day it is important to bring neotropical research to the fore now Sexual selection occurs when the male or female of a species is attracted by certain characteristics such as form color or behavior When those features lead to a greater probability of successful mating they become more prominent in the species Although most theoretical concepts concerning sexual selection and reproductive strategies are based upon North American and European fauna the Neotropical region encompasses much more biodiversity with as many as 15 000 plant and animal species in a single acre of rain forest This book illustrates concepts in sexual selection through themes ranging from female cryptic choice in insects sexual conflict in fish interaction between sexual selection and the immune system nuptial gifts visual and acoustic sexual signaling parental investment to alternative mating strategies among others These approaches distinguish Sexual Selection from current publications in sexual selection mainly because of the latitudinal and

taxonomic focus so that readers will be introduced to systems mostly unknown outside the tropics several of which bring into question some well established patterns for temperate regions Synthesizes sexual selection research on species from the Neotropics Combines different perspectives and levels of analysis using a broad taxonomic basis introducing readers to systems mostly unknown outside the tropics and bringing into question well established patterns for temperate regions Includes contributions exploring concepts and theory as well as discussions on a variety of Neotropical vertebrates and invertebrates such as insects fish arthropods and birds

### **Naturalized Reptiles and Amphibians of the World**

Christopher Lever,2003 This book describes how the various alien reptiles and amphibians now living in the wild throughout the world were first introduced how they subsequently became naturalized their present distribution and status in those countries to which they were introduced and their ecological and socio economic impact if any on the native biota and local economies Many species have had a more or less neutral impact being neither beneficial nor harmful However several have had a positive ecological or socio economic impact while some such as the cane toad have had an extremely destructive effect The criteria for inclusion of a species are that it should have been imported from its natural range to a new country by human agency either accidentally or deliberately and that it should currently be established in the wild in self maintaining and self perpetuating populations unsupported by and independent of mankind

### *The Ecology and Behavior of Amphibians*

Kentwood D. Wells,2010-02-15 Consisting of more than six thousand species amphibians are more diverse than mammals and are found on every continent save Antarctica Despite the abundance and diversity of these animals many aspects of the biology of amphibians remain unstudied or misunderstood The Ecology and Behavior of Amphibians aims to fill this gap in the literature on this remarkable taxon It is a celebration of the diversity of amphibian life and the ecological and behavioral adaptations that have made it a successful component of terrestrial and aquatic ecosystems Synthesizing seventy years of research on amphibian biology Kentwood D Wells addresses all major areas of inquiry including phylogeny classification and morphology aspects of physiological ecology such as water and temperature relations respiration metabolism and energetics movements and orientation communication and social behavior reproduction and parental care ecology and behavior of amphibian larvae and ecological aspects of metamorphosis ecological impact of predation on amphibian populations and antipredator defenses and aspects of amphibian community ecology With an eye towards modern concerns The Ecology and Behavior of Amphibians concludes with a chapter devoted to amphibian conservation An unprecedented scholarly contribution to amphibian biology this book is eagerly anticipated among specialists

### Conservation of Caribbean Island

Herpetofaunas Volume 2: Regional Accounts of the West Indies Adrian Hailey,Byron Wilson,Julia Horrocks,2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including

sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume provides regional accounts of the islands of the West Indies biogeographic region
