Reconstructing Behavior in the Primate Fossil Record J. Michael Plavcan, Richard F. Kay, William L. Jungers, Carel P. van Schaik, 2012-12-06 This volume brings together a series of papers that address the topic of reconstructing behavior in the primate fossil record The literature devoted to reconstructing behavior in extinct species is overwhelming and very diverse Sometimes it seems as though behavioral reconstruction is done as an afterthought in the discussion section of papers relegated to the status of informed speculation But recent years have seen an explosion in studies of adaptation functional anatomy comparative sociobiology and development Powerful new comparative methods are now available on the internet At the same time we face a rapidly growing fossil record that offers more and more information on the morphology and paleoenvironments of extinct species Consequently inferences of behavior in extinct species have become better grounded in comparative studies of living species and are becoming increasingly rigorous We offer here a series of papers that review broad issues related to reconstructing various aspects of behavior from very different types of evidence We hope that in so doing the reader will gain a perspective on the various types of evidence that can be brought to bear on reconstructing behavior the strengths and weaknesses of different approaches and perhaps new approaches to the topic We define behavior as broadly as we can including life history traits locomotion diet and social behavior giving the authors considerable freedom in choosing what exactly they wish to explore

Taphonomy Ronald E. Martin, 1999-10-28 Taphonomy A Process Approach is the first book to review the entire field of taphonomy or the science of fossil preservation It describes the formation of animal and plant fossils in marine and terrestrial settings and how this affects deciphering the ecology and extinction of past lifeforms and the environments in which they lived The volume emphasises a process approach to

taphonomy and reviews the taphonomic behaviour of all important taxa plant and animal It will be useful to anyone interested in the preservation of fossils and the formation of fossil assemblages but it is aimed primarily at advanced students and professionals working in paleontology stratigraphy sedimentology climate modeling and biogeochemistry *Examining Evolutionary Trends in Equus and its Close Relatives from Five Continents* Raymond Louis Bernor, Gina Marie Semprebon, Florent Rivals, Leonardo Santos Avilla, Eric Scott, 2020-03-12 Evolution of the horse has been an often cited primary example of evolution as well as one of the classic and important stories in paleontology for over a century and a half due to their rich fossil record across 5 continents North America South America Europe Asia and Africa The recent horse has served a profound role in human ancestry including agriculture commerce sport transport warfare and in prehistory for the subsistence of humans Many studies have examined the evolution of the Equidae and chronicled the striking changes in skulls dentition limbs and body size which have long been perceived to be a response to environmental shifts through time Most comprehensive studies heretofore have 1 focused on the Great Transformation changes that occurred in the early Miocene 2 involved tracking long term diversity or paleoecological trends on a single continent or within a geographical locality or 3 concentrated on the 3 toed hipparions The Plio Pleistocene evolutionary stage of horse evolution is punctuated by the great climatic fluctuations of the Quaternary beginning 2.6 Ma which influenced Equus evolution biogeographic dispersion and adaptation on a nearly global scale The evolutionary biology of Equus evolution across its entire range remains relatively poorly understood and often highly controversial Some of this lack of understanding is due to assumptions that have arisen because of the relatively derived craniodental and postcranial anatomy of Equus and its close relatives which has seemed to imply that that these forms occupied relatively homogenous and narrow dietary and locomotor niches notions that have not been adequately addressed and rigorously tested Other challenges have revolved around teasing apart environmentally driven adaptation versus phylogenetically defined morphological change Geochronologic age control of localities geographic provinces and continents has improved but in no way is absolute and can be reexamined in our proposed volume Temporal resolution for paleodietary paleohabitat and paleoecological interpretations are also challenging for understanding the evolution of Equus Our proposed volume attempts to assemble a group of experts who will address multiple dimensions of Equus evolution in time and space **Choice**, 1998 **Paleobiology of the Dinosaurs** James Orville Farlow, 1989 La sistemática, base del conocimiento de la biodiversidad Contreras Ramos, Atilano, 2007

Darwinism Defeated? Phillip E. Johnson, Denis Lamoureux, 1999-07 **Genetics, Paleontology, and Macroevolution** Jeffrey S. Levinton, 2001-08-06 An expanded and updated second edition comprehensively looks at macroevolution integrating evolutionary processes at all levels to explain animal diversity **A Concise Dictionary of Paleontology** Robert L. Carlton, 2018-03-07 This authored dictionary presents a unique glossary of paleontological terms taxa localities and concepts with focus on the most significant orders genera and species in terms of historical turning points such as mass

extinctions The book is an accurate and up to date collection of the most important paleontological terms and taxa and may be used as a resource by students researchers libraries and museums Though useful to many in professional and academic settings the book is also aimed at general readers of scientific literature who may enjoy the material without a background in paleontology While there are many current resources on the subject few fully encapsulate an accurate representation of the paleontological lexicon This book attempts to compile such a representation in a moderately comprehensive manner and includes a list of the most important monographs and articles that have been consulted to put together this essential work
