Mathematical and Algorithmic Foundations of the Internet Fabrizio Luccio,Linda Pagli,Graham Steel,2011-07-06 To truly understand how the Internet and Web are organized and function requires knowledge of mathematics and computation theory Mathematical and Algorithmic Foundations of the Internet introduces the concepts and methods upon which computer networks rely and explores their applications to the Internet and Web The book offers a unique approach to mathematical and algorithmic concepts demonstrating their universality by presenting ideas and examples from various fields including literature history and art Progressing from fundamental concepts to more specific topics and applications the text covers computational complexity and randomness networks and graphs parallel and distributed computing and search engines While the mathematical treatment is rigorous it is presented at a level that can be grasped by readers with an elementary mathematical background The authors also present a lighter side to this complex subject by illustrating how many of the mathematical concepts have counterparts in everyday life The book provides in depth coverage of the mathematical prerequisites and assembles a complete presentation of how computer networks function It is a useful resource for anyone interested in the inner functioning design and organization of the Internet

Information Access through Search Engines and Digital Libraries Maristella Agosti,2007-10-27 The Information Management Systems group at the University of Padua led by Maristella Agosti has been a major contributor to information retrieval and digital libraries for nearly twenty years This group has produced some of Italy s best known IR researchers whose work spans a broad range of topics as the papers in this book demonstrate One of the goals of the IR book series is to highlight the work of academic research centers in our field in order to balance the perception that everyone in IR works for a search engine company One of the best aspects of our field is that as academic researchers we can work with new graduate students and collaborate with companies to ensure that our research has direct impact on systems that people use every day The Padua group is typical in this respect and has been involved in a series of collaborations and major European projects over the years I hope this volume inspires graduate students to pursue research in IR and I encourage other research groups to contribute their own collections of papers
