Investigations in Number, Data, and Space, 2008 Part of a K 5 mathematics curriculum with curriculum units for classroom use and resources for teachers the Investigations curriculum was developed at TERC formerly Technical Education Research Centers *Investigations in Number, Data, and Space*, 2008 Elementary Mathematics Curriculum Materials Janine T. Remillard, Ok-Kyeong Kim, 2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors *Investigations in Number, Data, and Space*, 2017 Part of a K 5 mathematics curriculum with curriculum units for classroom use and resources for teachers the Investigations curriculum was developed at TERC formerly Technical Education Research Centers Posing and Solving Mathematical Problems Patricio Felmer, Erkki Pehkonen, Jeremy Kilpatrick, 2016-04-29 This book collects recent research on posing and solving mathematical problems Rather than treating these two crucial aspects of school mathematics as separate areas of study the authors approach them as a unit where both areas are measured on equal grounds in relation to each other The contributors are from a vast variety of countries and with a wide range of experience it includes the work from many of the leading researchers in the area and an important number of young researchers The book is divided in three parts one directed to new research perspectives and the other two directed to teachers and students respectively **Math for All Participant Book (3-5)** Babette Moeller, Barbara Dubitsky, Marvin Cohen, Karen Marschke-Tobier, Hal Melnick, Linda Metnitsky, 2011-08-22 A mathematics professional development program for inclusive classrooms This professional development program shows general and special education teachers how to collaborate to provide a high quality standards based mathematics education to all students including those with disabilities This book includes the handouts and reproducibles for the program The

Guided Math Lessons in Fourth Grade provides detailed lessons to help you bring guided math groups to life. Based on the bestselling Guided Math in Action, this practical book offers 16 lessons taught in a round of three concrete, pictorial, and abstract. The lessons are based on the priority standards and cover fluency, word problems, fractions, and place value. Author Dr. Nicki Newton shows you the content as well as the practices and processes that should be worked on in the lessons so that students not only learn the content but also how to solve problems, reason, communicate, their thinking model, use tools, use precise language, and see structure and patterns. Throughout the book, you'll find tools, templates, and blackline masters so that you can instantly adapt the lesson to your specific needs and use it right away. With the easy-to-follow plans in this book, students can more work effectively in small guided math groups and have loads of fun along the way. Remember that guided math groups are about doing the math. So doing mathematical sketches to show what they understand and can make sense of the abstract numbers. When students are given the opportunities to make sense of the math in hands-on and visual ways, then the math begins to make sense. **Investigations in Number, Data, and Space**, 2017. Part of a K-5 mathematics curriculum with curriculum units for classroom use and resources for teachers. The Investigations curriculum was developed at TERC formerly Technical Education Research Centers. **Mathematics (Education) in the Information Age** Stacy A. Costa, Marcel Danesi, Dragana Martinovic, 2020-12-10. This book brings together ideas from experts in cognitive science, mathematics, and mathematics education to discuss these issues and to present research on how mathematics and its learning and teaching are evolving in the Information Age. Given the ever-broadening trends in Artificial Intelligence and the processing of information, generally the aim is to assess their implications for how math is evolving and how math should now be taught to a generation that has been reared in the Information Age. It will also look at the ever-spreading assumption that human intelligence may not be unique, an idea that dovetails with current philosophies of mind such as posthumanism and transhumanism. The role of technology in human evolution has become critical in the contemporary world. Therefore, a subgoal of this book is to illuminate how humans now use their sophisticated technologies to chart cognitive and social progress. Given the interdisciplinary nature of the chapters, this will be of interest to all kinds of readers from mathematicians themselves working increasingly with computer scientists to cognitive scientists who carry out research on mathematics cognition and teachers of mathematics in a classroom. **What Every Principal**

Engaging (with) Mathematics and Learning to Teach. An Integrated Approach to Mathematics Preservice Education Hilary Povey, 2017-07-31 Mathematics education research indicates the value of a meaning making and problem solving approach to the teaching mathematics in primary and lower secondary classrooms Yet teachers most of whom have not experienced such pedagogies in their own mathematics learning often find it difficult to implement such approaches Based on over twenty five years in mathematics preservice education this book is intended to support preservice tutors and their students in bridging this gap The book takes six topics from the primary and lower secondary curriculum place value number systems the four rules of number polygons their properties and their symmetries natural numbers including factors multiples powers and

simple number theory fractions decimals and irrational numbers and polyhedra Each topic is located very briefly in the research literature and its place in or linked to the primary and lower secondary curriculum is discussed Relevant mathematical activities follow many of which can transfer directly from the university to the school classroom with very little adaptation The final topic chapter is rather different It deals with group theory an aspect of mathematics which is related to primary and lower secondary mathematics structurally but not in terms of recognisable content There is an emphasis throughout on the need to reflect on mathematical experience to develop sensitivity and self awareness and to promote an approach to the subject that is creative and inclusive
