The Handbook of Technology and Second Language Teaching and Learning Carol A. Chapelle, Shannon Sauro, 2017-06-28
The Handbook of Technology and Second Language Teaching and Learning presents a comprehensive exploration of the impact of technology on the field of second language learning. The rapidly evolving language technology interface has propelled dramatic changes in and increased opportunities for second language teaching and learning. Its influence has been felt no less keenly in the approaches and methods of assessing learners' language and researching language teaching and learning. Contributions from a team of international scholars make up the Handbook, consisting of four parts: language teaching and learning through technology; the technology pedagogy interface; technology for L2 assessment and research; and development of technology for language learning. It considers how technology assists in all areas of language development, the emergence of pedagogy at the intersection of language and technology, technology in language assessment, and major research issues in research and development of technologies for language learning. It covers all aspects of language, including grammar, vocabulary, reading, writing, listening, speaking, pragmatics, and intercultural learning, as well as new pedagogical and assessment approaches and new ways of conceiving and conducting research and development. The Handbook of Technology and Second Language Teaching and Learning demonstrates the extensive, multifaceted implications of technology for language teachers, learners, materials developers, and researchers. Spelling Rebecca Treiman, 2013-06-29 are the findings that Wade Woolley and Siegel obtained when they studied children for whom English was a second language Although the second language speakers performed more poorly than the native speakers on tests of syntactic knowledge phoneme deletion and pseudoword repetition the second language speakers were not worse than the native speakers in spelling These results suggest that even if children have not fully mastered the sound system of their second language they need not be disadvantaged in spelling it The findings appear to pose a challenge to views of reading and spelling that place primary emphasis on phonology The Muter and Snowling study together with the Nunes Bryant and Bindman study broadens the focus by examining aspects of spelling beyond phonology Muter and Snowling in their longitudinal study of British school children examined the degree to which various linguistic skills measured between the ages of 4 and 6 predicted spelling ability at age 9 The results support the idea that phonological skill plays an important role in spelling development and further suggest that awareness of phonemes is more strongly related to spelling ability than awareness of rimes In addition grammatical awareness appears to predict spelling skill Children who are able to reflect on meaning relationships among words may be in a position to understand how this information is represented in English spelling
