Road Policing and Technology Great Britain: Parliament: House of Commons: Transport Committee,2006-10-31 In 2005 traffic collisions killed 3 201 people with almost 29 000 seriously injured on British roads Although the level of road crash fatalities and injuries has fallen over successive decades and Britain has one of the safest road environments in the world the numbers still remain far too high and many of these casualties might have been avoided if there was a higher level of compliance with traffic law The Committee's report examines the road casualty problem focusing on the role of roads policing and the contribution which enforcement can make to casualty reduction It considers how technology is influencing the policing and enforcement of particular offences relating to speeding drink and drug driving driving whilst using a mobile phone and driving while impaired by fatigue The report finds that despite progress made by the Department for Transport against its 2010 casualty reduction targets the Home Office has continued to deny traffic law enforcement issues the priority it requires and must explicitly adopt the targets as a key part of its future national policing plans Investment and research into new technological equipment such as roadside breath testing equipment and time distance cameras and a higher profile and more visible traffic enforcement effort would bring important casualty reductions However the efficiencies which technology can bring should

not be seen as a opportunity to cut the number of roads police officers as technology alone cannot carry out the multitude of functions undertaken by roads police officers      Proceedings of the Canadian Society for Civil Engineering Annual Conference 2023, Volume 2 Serge Desjardins,Gérard J.
