

## Feeding and Swallowing Problems Can Be a Parent's Greatest Concern

### Subtle Indicators of Dysphagia

- Difficulty sucking
- Fatigue with feedings
- Lengthy feedings
- Food or liquid refusal
- Spitting-up or vomiting frequently
- Liquid/food coming out of nose

### Strong Indicators of Dysphagia

- Parent/caregiver concern
- Difficulty coordinating swallowing with respiration
- Congestion during and/or after feedings
- Color or state changes during feeding
- Frequent or lengthy colds and congestion
- Weight loss or failure to thrive
- Choking, coughing, sneezing or gagging during meals

### Thickening Liquids

When recommending the use of rice cereal to thicken formula, try pre-blending the cereal before adding to the formula. This should eliminate the tendency to cut holes in bottle nipples. Cutting holes in nipples can increase aspiration risks and interfere with typical oral motor development needed for later feeding and speech skills.

### Gastroesophageal Reflux

Clinical diagnosis of reflux may be difficult because some children reflux internally and show no obvious indicators. In addition to medical complications, reflux can interfere with typical feeding development. Oral sensori-motor complications seen in children with reflux may also include refusal to eat, difficulty transitioning to textured foods, swallowing food whole or oral sensitivities. Children with reflux are frequently described as "picky" eaters and need feeding therapy to facilitate normal development and reduce additional complications.

Children just don't  
"outgrow it"

### Red Flags

- Decreased oral exploration
- Oral sensitivities
- Refusal to advance textures
- Swallowing foods whole
- "Chewing" with lips closed
- Identifiable food found on diaper/spit up

Early  
identification  
and Treatment  
can:

- Reduce time in therapy
- Reduce costs
- Reduce additional complications
- Decrease family stress
- Decrease behavioral component
- Reduce the potential for additional costly medical procedures

### Typical Development

Ages	What They Should Be Eating	Oral Motor Development
0-4 mos.	Breast or bottle exclusively	Rooting reflex, rhythmical sucking (1-2 sucks per swallow). Easy breathing. No choking.
4-6 mos.	Cereal Stage 1 baby foods	Opens mouth for spoon. Spoon placed easily in mouth. Emerging top lip to clear spoon.
6-8 mos.	Teething biscuits Dissolvable soft crackers	Emerging tongue lateralization for "munching" soft textures.
9-12 mos.	Soft finger foods Beginning cup drinking	Lateral tongue movement for chewing with lips open. Does not gag on textured purees.
12-18 mos.	Experimenting with variety of textures and tastes	Drinks well from open cup. Bites through soft solids. Able to chew easy solids.
By 18 mos.	Most table foods	Rotary jaw movements with chewing. No gagging or choking.
24 mos.	Most table foods	Holds cup between lips. No gagging or choking with meals. Tolerates most foods.

### Sensori-Motor Activities

- Provide floor and tummy play for babies and children
- Encourage babies and children to mouth safe toys/objects
- Experiment with age appropriate food textures
- Have the child finger paint with yogurt or pudding
- Have the child get messy during mealtimes

Pediatric Dysphagia Jay Paul Willging, Claire Kane Miller, Aliza P. Cohen, 2019-12-09

Pediatric Dysphagia Etiologies Diagnosis and Management is a comprehensive professional reference on the topic of pediatric feeding and swallowing disorders. Given that these disorders derive from abnormalities in the function and/or structure of the airway and digestive systems, multiple clinical specialists may be involved in the evaluation and management of affected children at any given point in time. Therefore, this text includes significant contributions from a wide range of experts in pediatric dysphagia, including all members of the Interdisciplinary Feeding Team at Cincinnati Children's Medical Center. These experts present an in-depth description of their roles in the diagnosis and management of dysphagic children, providing the reader with an understanding of why a multidisciplinary model of care is key to the optimization of outcomes.

Pediatric Dysphagia is divided into five parts. In Part I, readers are provided with an overview of the embryologic development of aerodigestive structures that relate to swallowing, an introduction to neural organization related to swallowing function, and physiologic aspects of swallowing, a synopsis of oral motor development, a discussion of the various etiologic categories of feeding and swallowing disorders, and an overview of genetic disorders associated with feeding and swallowing issues. Part II covers the clinical and instrumental assessment of patients, including the interdisciplinary feeding team infrastructure and function, the roles of individual members of the feeding team, the specific diagnostic tests commonly used in the assessment of feeding and swallowing issues, the classification of neonatal intensive care units, and the assessment and management of feeding and swallowing issues encountered in the neonatal intensive care unit. Part III focuses on the management of pediatric dysphagia, covering a wide range of treatment strategies and interventions for children with various categories of feeding disorders. Part IV includes an introduction to the concept of evidence-based practice and the application of evidence-based strategies in the management of dysphagia. Part V presents a brief overview of the role of ethics in healthcare and ethical considerations in the treatment of dysphagic children.

In summary, the overall aim of this comprehensive text is to provide all pediatric professionals involved in the care of dysphagic patients with a basic understanding of the complexity of this disorder, the anatomic, neurologic, and physiologic components involved in this disorder, an overview of the diverse population of children who suffer with this disorder, and with a wide range of management approaches based on patient needs and capabilities. The authors also address clinical problem solving and decision making, inspiring readers to develop multidisciplinary models of care at their own institutions.
