Epilepsy in Children, 2E Sheila J Wallace,Kevin Farrell,2004-02-27 Epilepsy is the most common neurological disorder of childhood occurring both in children whose physical and cognitive states are otherwise normal as well as being a facet of a more generalised and severe brain disease There are many manifestations of epilepsy and therefore a diversity of factors in underlying pathology responses to treatment Molecular Diagnostics of Pediatric Cancer, volume II Jing He,Yizhuo Zhang,Jochen Rössler,Hua Tan,Jinhong Zhu,2024-10-09 The survival rate of childhood cancer has increased remarkably in the past three decades yet prolonged delay in diagnosis of pediatric cancer is still a major challenge The genetics and biology

of pediatric cancer are distinct from those of adult cancer. A growing number of predictive diagnostic therapeutic and prognostic biomarkers have been identified at a genomic transcriptomic proteomic metabolomic and cellular levels. However, these identified biomarkers are mostly applied to adult cancer patients and are not optimal for pediatric cancer patients. Therefore, it remains an urgency to seek for novel biomarkers that are specifically applied to pediatric cancer. A better understanding of molecular biology including the identification and characterization of predictive diagnostic therapeutic and prognostic biomarkers will hopefully provide improved clinical outcomes for children with cancer. This Research Topic aims to unify the advances in novel biomarkers and molecular techniques for pediatric cancer. We aim to cover all aspects of predictive diagnostic therapeutic and prognostic biomarkers which will provide us better understanding of pediatric cancer and a medical pathway to its eventual cure.

The Problem of Childhood Hypoglycemia, volume II Indraneel Banerjee, Klaus Mohnike, 2024-05-03. Hypoglycemia in infants and children is common and is caused by a number of sources. Childhood hypoglycemia has the potential to cause brain damage leading to lifelong neurodisability. However, definitions and clinical management of hypoglycemia remain variable given uncertainty over thresholds of harm and absence of robust clinical evidence for appropriate treatment. It is important to synthesize our current understanding of the etiology of mild and severe forms of hypoglycemia to formulate treatment strategies that are effective and cause minimal harm.
