Motion And Representation The Language Of Human Movement:

Motion and Representation Nicolas Salazar Sutil, 2015-05-08 An examination of the ways human movement can be represented as a formal language and how this language can be mediated technologically In *Motion and Representation* Nicol s Salazar Sutil considers the representation of human motion through languages of movement and technological mediation He argues that technology transforms the representation of movement and that representation in turn transforms the way we move and what we understand to be movement Humans communicate through movement physically and mentally To record and capture integrated movement both bodily and mental by means of formal language and technological media produces a material record and cultural expression of our evolving kinetic minds and identities Salazar Sutil considers three forms of movement inscription a written record notation a visual record animation and a computational record motion capture He focuses on what he calls kinetic formalism formalized movement in such pursuits as dance sports live animation and kinetic art as well as abstract definitions of movement in mathematics and computer science He explores the representation of kinetic space and spatiotemporality the representation of mental plans of movement movement notation including stave notation Labanotation and such contemporary forms of notation as Choreographic Language Agent and the impact of digital technology on contemporary representations of movement in particular motion capture technology and Internet transfer protocols *Motion and Representation* offers a unique cultural theory of movement and of the ever changing ways of representing movement

Human Movement Understanding P. Morasso, V. Tagliasco, 1986-10-01 The volume applies to the study of the motor system the computational approach developed by David Marr for the visual system Accordingly understanding movement is viewed as an information processing problem centred on the representation of appropriate computational structures In particular the book deals with the representation of objects concurrent parallel processes trajectory formation patterns and patterns of interaction with the environment A number of modeling techniques are discussed ranging from computational geometry to artificial intelligence integrating very different aspects of movement especially those which are not directly motoric

Controls and Art Amy LaViers, Magnus Egerstedt, 2014-01-23 Dancing humanoids robotic art installations and music generated by mathematically precise methods are no longer science fiction in fact they are the subject of this book This first of its kind anthology assembles technical research that makes such creations possible In order to mechanize something as enigmatic and personal as dance researchers must delve deeply into two distinct academic disciplines control theory and art Broadly this research uses techniques from the world of art to inspire methods in control enables artistic endeavours using advanced control theory and aids in the analysis of art using metrics devised by a systems theoretic approach To ensure that artistic influences are well represented the individual chapters are focused so that they relate their contribution to the arts meaningfully and explicitly Specially composed introductions set up the contributions either in terms of inspiration by artistic principles or their contribution to the arts through new analysis tools To facilitate this the majority of the chapters are authored jointly by experts in control theory and by artists including dancers choreographers puppeteers and painters Connections between controls and art then permeate the text so that these important relationships play a central role in the book *Controls and Art* surveys current projects in this area including a disco dancing robot a reactive museum exhibit and otherworldly music and illuminates open problems and topics for research in this emerging interdisciplinary field It will draw attention both from experts in robotics and control interested in developing the artistic side of their creations and from academics studying dance theater music and the visual arts with an interest in avant garde means of production

Sherman Wilcox,1992-08-06 We now know that natural signed languages such as American Sign Language French Sign Language British Sign Language and others are fully independent languages But natural signed languages are only one way of conveying language in the visual gestural modality Signed languages also have mechanisms for representing the material of oral languages Fingerspelling is one example of such a representational system This book examines fingerspelling from a phonetic perspective Several studies of the kinematics of fingerspelling articulators are reported From these detailed analyses of articulator timings and velocities conclusions are drawn which suggest that like speech fingerspelling may be explained in terms of coordinative structures and task dynamics The thrust of the book is to explore the notion that signed and spoken languages can be compared not only as abstract linguistic systems but also at the physical level as dynamically structured articulations An implication of these studies is that a common basis in gesture can be found for the production perception and neural organization of signed and spoken languages *Semantic Multimedia* Yannis Avrithis,2006-11-27

Communication in Humans and Machines Ipke Wachsmuth, Manuela Lenzen, Günther Knoblich, 2008-09-04 When people communicate face to face they don't just exchange verbal information Rather communication encompasses the whole body Communication partners synchronize their body sway and mimic or imitate each other's body postures and actions They produce a multitude of manual and facial gestures that help to illustrate what is being said show how communication partners feel or or reveal verbal deception Moreover face to face communication takes place in shared contexts where partners jointly attend and refer to the same objects often while working on joint tasks such as carrying a table or repairing a car together Traditionally communication research has neglected these parts of communication using the engineering model

of signal transmission as the main theoretical metaphor This book takes a new look at recent empirical findings in the cognitive and neurosciences showing that the traditional approach is insufficient and presenting a new interdisciplinary perspective the Embodied Communication perspective The core claim of the Embodied Communication perspective is that human communication involves parallel and highly interactive couplings between communication partners These couplings range from low level systems for performing and understanding instrumental actions like the mirror system to higher systems that interpret symbols in a cultural context The book can also serve as a guide for engineers who construct artificial agents and robots that should be able to interact with humans

Gesture and Sign Languages in Human-Computer Interaction Ipke Wachsmuth, Timo Sowa, 2002-04-24 This book constitutes the thoroughly refereed post proceedings of the International Workshop on Gesture and Sign Languages in Human Computer Interaction GW 2001 held in London UK in April 2001 The 25 revised full papers and 8 short papers were carefully reviewed and selected for inclusion in the post proceedings The papers are organized in topical sections on gesture recognition recognition of sign languages nature and notations of sign languages gesture and sign language synthesis gestural action and interaction and applications based on gesture control Graphics Interface '86, Vision Interface '86 ,1986 Dance Notations and Robot Motion Jean-Paul Laumond, Naoko Abe, 2015-11-24 How and why to write a movement Who is the writer Who is the reader They may be choreographers working with dancers They may be roboticists programming robots They may be artists designing cartoons in computer animation In all such fields the purpose is to express an intention about a dance a specific motion or an action to perform in terms of intelligible sequences of elementary movements as a music score that would be devoted to motion representation Unfortunately there is no universal language to write a motion Motion languages live together in a Babel tower populated by biomechanists dance notators neuroscientists computer scientists choreographers roboticists Each community handles its own concepts and speaks its own language The book accounts for this diversity Its origin is a unique workshop held at LAAS CNRS in Toulouse in 2014 Worldwide representatives of various communities met there Their challenge was to reach a mutual understanding allowing a choreographer to access robotics concepts or a computer scientist to understand the subtleties of dance notation The liveliness of this multidisciplinary meeting is reflected by the book thank to the willingness of authors to share their own experiences with others
