**Methods. Addendum 1.** James M. Essig, 2015-11-27 The operator presented in this short volume is meant to be inserted into each linear power term in the now two huge formula for which sigma series notion is included and the respective summations are with respect to the letter j Accordingly there are thousands of such linear power terms The operator is so generally distributed because each of the self evident aspects presented in the operator are assumed to augment the propulsive force and power terms considered for the numerous additional propulsion modes modeled by the sigma series with respect to the letter j Thus the new propulsion modes featured in this operator are assumed to be at least almost completely active on all portions of the spacecraft Note that the operator is understood to have context specific magnitudes as may be relevant for various modes of propulsion so augmented and various differential portions of a spacecraft which may be affected differently from other portions by the propulsion methods implied in the operator The operator is assume to be dimension less     *The Tachyon Motivated Christmas Tree Light-Sail Smorgasbord.
